PART A

Getting started

Everything you need before your first day: creating the workspace, signing in, joining a team by invitation, and finding your way around the screens.

Section	What you'll find
A1	Welcome to ServiceFlow, how this manual is organised, and its conventions
A2	Create your workspace (first owner only)
A3	Sign in, sign out and reset your password
A4	Join a workspace by invitation
A5	Find your way around: sidebar, page headers, lists and forms
A6	If you can't get in

Where to start

Setting up a new business? Start with A2. Joining an existing team? Start with A4 — then read your role guide in Part B.

A1 Welcome to ServiceFlow

ServiceFlow is the web admin your team uses to run field-service work in one shared workspace. Customers and their service requests come in, requests become jobs, jobs are dispatched to technicians and scheduled, quotations are sent and approved, invoices are issued and payments are recorded.

Everything you create belongs to your organization. Other businesses using ServiceFlow can never see your records, and inside your workspace each person only sees the modules their role allows.

How this manual is organised

Part	What's inside	Read it when
A · Getting started	Creating the workspace, signing in, joining by invitation, the layout of every screen.	You're new to ServiceFlow.
B · Role guides	What each of the six roles sees and does, with a typical day and step-by-step tasks.	Start with the guide for your own role.
C · Module reference	Every page in sidebar order: who can use it, fields, statuses, rules and how-tos.	You need the details of one module.
D · Workflows & help	An end-to-end example, status glossary, key terms, troubleshooting, setup checklist and known limitations.	Training a new colleague, or something isn't working.

Conventions

- `/jobs` is the address of a page. Type it after your workspace's web address, or open the page from the sidebar.
- **Bold** marks buttons, links and field names exactly as they appear on screen.
- Status badges are drawn the way the app shows them, for example:

New Reviewing In progress Awaiting approval Completed Cancelled Draft

- Times you enter — visit times and payment times — use your organization's timezone, set by the Owner. Record dates such as **Created** and **Last updated** are shown in UTC; each page says which applies.
- Limits such as "2–120 characters" are the rules ServiceFlow checks when you save.

A2 Create your workspace

The first person to register becomes the workspace **Owner**. Do this once for your business — everyone else joins by invitation (A4).

- 1 Open `/register`.
- 2 Enter your **Full name**, **Company name** and **Work email**, choose a **Password** of at least 8 characters, type it again in **Confirm password**, and accept the terms.
- 3 Select **Create your workspace**. ServiceFlow creates your organization and makes you its Owner.
- 4 On the verification step, open the email from ServiceFlow and follow the link to verify your address.
- 5 Go to `/login` and sign in. You arrive on the Dashboard — continue with the Owner's first-day setup in B3.

Tip

Didn't receive the verification email? Try signing in anyway: ServiceFlow sends a fresh link and reminds you to check your spam folder.

A3 Sign in, sign out and reset your password

- **Sign in** at </login> with your work email and password (at least 8 characters).
- A sign-in lasts up to 5 days on that browser. To leave, open the user menu in the top-right corner and choose **Sign out**.
- **Forgot password?** on the sign-in page opens </forgot-password>. Enter your work email and follow the reset link that is emailed to you.
- If a form tells you your session has expired, sign in again in a new tab, come back and save. Your entries stay in the form.

Note

ServiceFlow starts a session only straight after you enter your password, and only for verified email addresses. If an administrator suspends your membership, your access ends on your next page load.

A4 Join a workspace by invitation

Team members don't register a new workspace. An Owner or Administrator creates an invitation link for your email and role (C14) and sends it to you — ServiceFlow doesn't email invitations itself yet.

- 1 Open the invitation link. It shows the role you're invited as and the date the link stops working.
- 2 Choose **I have an account** to sign in with the invited email, or **Create an account** to set your name and a password.
- 3 New accounts verify their email first: open the verification email, return to the same invitation link and choose **Accept and sign in**.
- 4 You're signed in to the workspace with the role on the invitation.

Invitation rules

An invitation link works **once**, for **7 days**, and only for the **email it was created for**.

If the browser is already signed in with another account, choose **Sign out and continue**. If you see **This link isn't valid anymore**, the link expired, was used or was revoked — ask for a new one.

A5 Find your way around

The workspace layout

- **Sidebar** — the modules your role can use, in five groups: Overview, Operations, Sales & billing, Inventory and Administration. On a phone or narrow window, open it with the menu button in the top bar.
- **Top bar** — your organization's name on the left, and your user menu with **Sign out** on the right.
- **Page header** — breadcrumbs, the page title and the page's main actions, such as **Add customer** or **New job**.

Lists

- Search boxes match the **beginning** of a name or title: "boil" finds "Boiler service" but not "Annual boiler check".
- Choose filters, then **Apply filters**. **Clear** resets them.
- Lists show 25 records per page (50 on the stock and payment ledgers). Use **Next page** and **First page** to move through them.

Forms

- Required fields are marked with *. The hint under each field explains its rules; problems appear in red under the field.
- If a save fails, your entries stay in the form. If you try to leave with unsaved changes, the browser asks you to confirm.
- If two people edit the same record, the second save is refused with a message that the record has changed. Open the latest version (a link is offered), then re-apply your change.
- Pressing save twice, or retrying after a lost connection, never creates a duplicate record.

A6 If you can't get in

What you see	What it means	What to do
"Your account isn't active in a ServiceFlow workspace."	Your membership is suspended, or your account has no active workspace.	Ask your Owner or an Administrator to reactivate you. Use Sign out to switch accounts.
"Verify your email before signing in..."	Your email address isn't verified yet.	Open the newest verification email (check spam), then sign in again.
A "not found" page after following a link	The page belongs to a module your role can't use, or the record isn't in your workspace.	Check the permission matrix (B2) or ask an Administrator.
A sidebar item you expected is missing	Your role doesn't include that module.	See B2; roles are changed on the Team page (C14).

PART B

Role guides

ServiceFlow has six roles. Read the overview and the permission matrix, then the guide for your own role: what you see, a typical day and step-by-step tasks.

Section	What you'll find
B1	The six roles at a glance
B2	Permission matrix: which role can use which module
B3	Owner guide
B4	Administrator guide
B5	Manager guide
B6	Dispatcher guide
B7	Technician guide
B8	Accountant guide

Where to start

Not sure which role you have? Look at your sidebar and compare it with the permission matrix in B2, or ask your Owner.

B1 The six roles at a glance

Every member of your workspace has exactly one role. The role decides which sidebar items they see and what they can change. The Owner or an Administrator sets roles on the Team page (C14).

Owner

RUNS THE WORKSPACE

Created the workspace. Uses every module and is the only role that can change organization details and workspace defaults. One per workspace.

Typically the business owner.

Administrator

RUNS THE TEAM

Everything except Organization and Settings. Invites people, sets their roles, suspends leavers, and can work in every operations, billing and inventory module.

Typically the office or operations head.

Manager

RUNS OPERATIONS

Customers, technicians, service types, requests, jobs and the schedule, plus quotations, products and stock.

Typically a service manager or supervisor.

Dispatcher

RUNS THE DAY

Logs calls as service requests, turns them into jobs, assigns technicians, and keeps the schedule and job statuses up to date.

Typically the front desk or a coordinator.

Technician

DOES THE WORK

Sees their own assigned jobs and visit times on a personal dashboard. Their progress is recorded by dispatchers.

Typically a field engineer.

Accountant

RUNS THE MONEY

Quotations, invoices and payments, plus the billing snapshot on the dashboard.

Typically the accounts team.

B2 Permission matrix

A tick means the role can open the module and make changes in it. Sidebar items follow the same rules, so each person only sees what they can use.

Module	Owner	Admin	Manager	Dispatcher	Technician	Accountant
Overview						
Dashboard: schedule, jobs, team and requests	✓	✓	✓	✓	Own jobs ¹	—
Dashboard: billing snapshot	✓	✓	—	—	—	✓
Operations						
Customers	✓	✓	✓	✓	—	Pick on forms ³
Technicians	✓	✓	✓	—	—	—
Service types	✓	✓	✓	—	—	—
Service requests	✓	✓	✓	✓	—	—
Jobs (create, dispatch, statuses, notes)	✓	✓	✓	✓	—	—
Schedule	✓	✓	✓	✓	—	—
Sales & billing						
Quotations (create, send, approve, reject)	✓	✓	✓	—	—	✓
Convert a quotation to an invoice ²	✓	✓	—	—	—	✓
Invoices	✓	✓	—	—	—	✓
Payments	✓	✓	—	—	—	✓
Inventory						
Products	✓	✓	✓	—	—	Pick on forms ³
Stock	✓	✓	✓	—	—	—
Administration						
Organization settings	✓	—	—	—	—	—
Team (members and invitations)	✓	✓	—	—	—	—
Settings (workspace defaults)	✓	—	—	—	—	—

¹ Technicians see the dashboard panels for jobs assigned to their own technician profile only.

² Converting needs invoice access. Managers can create, send, approve and reject quotations, but an Owner, Administrator or Accountant turns them into invoices.

³ Accountants can choose catalog products and customers on quotations and invoices without having the Products or Customers pages.

Note

A role change takes effect on the person's next page load. Suspended members lose access immediately; their name stays on the records they created.

B3 Owner guide

You created the workspace, so you can use every module. Only you can change the organization's details and the workspace defaults that every quotation, invoice and schedule relies on.

Your week

- Glance at the **Dashboard**: today's schedule, pending actions and the **Billing** snapshot.
- Review **Team**: pending invitations, roles, and anyone who has left.
- Revisit **Settings** when your tax rate, payment terms or working hours change.

Good to know

- Set the timezone before scheduling: visit times, the dashboard's day, quote validity and due dates all use it.
- Prefix changes affect new numbers only; the sequence continues (JOB-000041 → WRK-000042).
- Currency and tax changes apply to new documents; existing ones keep their values.
- Nobody can change the owner's access from the Team page, and ownership can't be transferred in the app.

YOUR SIDEBAR

ADMINISTRATION

- Organization
- Team
- Settings

First-day setup

- 1 **Organization** (/settings/organization) — check the organization name, choose your **Timezone**, and set the **Job prefix**, **Invoice prefix** and **Quote prefix**. See C13.
- 2 **Settings** (/settings) — choose the **Currency**, **Default tax rate**, **Quote validity**, **Invoice due days**, working hours and the day your week starts. See C15.
- 3 **Team** (/settings/team) — create invitation links for your administrators, managers, dispatchers, technicians and accountants, and send each link to its person. See C14.
- 4 **Service types** (/service-types) — list the work you offer with an estimated duration for each. See C4.
- 5 **Technicians** (/technicians) — once the people invited as Technician have accepted, create a technician profile for each. See C3.
- 6 **Products** and **Stock** — add the parts and services you sell, then record opening stock with a **Count**. See C11 and C12.
- 7 **Customers** (/customers) — add your regular customers, or let dispatchers add them as calls arrive. See C2.
- 8 Run one test job from request to payment (D1) so everyone sees the whole flow.

B4 Administrator guide

You can do everything the Owner can except change Organization and workspace Settings. Your extra responsibility is the team: who can sign in, and with which role.

Your day

- Handle requests to add, change or remove access on the **Team** page.
- Work in any operations, billing or inventory module when needed.
- Keep an eye on the dashboard's **Billing** snapshot.

Good to know

- You can't change the Owner's access, or your own role and access — ask the Owner or another Administrator.
- Administrators can invite other Administrators.
- Existing members can't be invited again; reactivate a suspended member instead.

YOUR SIDEBAR

OVERVIEW

- Dashboard

- Technicians
- Service types
- Service requests
- Jobs
- Schedule

SALES & BILLING

- Quotations
- Invoices
- Payments

INVENTORY

- Products
- Stock

ADMINISTRATION

- Team

Step by step

Invite a colleague

- 1 Open **Team** (/settings/team).
- 2 In **Invite a team member**, enter their email and choose a role: Administrator, Manager, Dispatcher, Technician or Accountant.
- 3 Select **Create invitation link**. The link is shown once — copy it now.
- 4 Send it to your colleague by email or chat. It works once, for 7 days, for that email only.
- 5 When they accept, they move from **Pending invitations** to **Members**.

Change someone's role

- 1 On **Team**, find the person under **Members**.
- 2 Choose the new role in the role list on their row. It saves immediately and applies from their next page load. (Reactivate a suspended member before changing their role.)

Suspend someone who's leaving

- 1 On **Team**, select **Suspend** on their row and confirm.
- 2 Their access ends at once; records they created keep their name. Select **Reactivate** to restore access later.

Replace a lost or expired invitation link

- Under **Pending invitations**, choose **Regenerate link** and send the new link. The old link stops working.
- To cancel an invitation, choose **Revoke**.

B5 Manager guide

You run day-to-day operations and keep the catalog right: customers, technicians, service types, requests, jobs and the schedule, plus quotations, products and stock.

Your day

- Start on the **Dashboard**: today's schedule, **Pending actions** and technician availability.
- Work requests and jobs exactly like a dispatcher (B6) whenever needed.
- Price work that needs approval: raise quotations from jobs, send them, and record the customer's decision.
- Keep products and stock current and act on the **Low stock** panel.

Good to know

- Keep each service type's **Estimated duration** realistic — it's copied onto jobs and shown on the schedule.
- You can approve quotations; converting one into an invoice needs an Owner, Administrator or Accountant.
- Invoices, payments, the team, settings and the dashboard's billing snapshot aren't part of your role.

Step by step

Add a technician profile

Before you start, the person must have accepted an invitation with the **Technician** role.

- 1 Open **Technicians** and select **Add technician**.
- 2 Choose the team member. Only active members with the Technician role who don't have a profile yet are listed.
- 3 Check the **Display name**, add a **Phone number** if you like, and set the **Status** (new profiles start as Offline).
- 4 Select **Create technician**. The profile gets an employee number such as TEC-000001 and can now be dispatched.

YOUR SIDEBAR

OVERVIEW

- Dashboard

OPERATIONS

- Customers
- Technicians
- Service types
- Service requests
- Jobs
- Schedule

SALES & BILLING

- Quotations

INVENTORY

- Products
- Stock

Raise and send a quotation for a job

- 1 Open the job. While it is Diagnosing, Quote needed, Awaiting approval, Approved, On hold or In progress, its **Billing** card shows **New quotation**.
- 2 The customer and job are already filled in. Add a **Title**, an optional **Valid until** date and **Notes**.
- 3 Add lines with **Add from catalog** (price and tax come from the product) or **Add custom line**. Totals update as you type.
- 4 Select **Create quotation**, check it, then choose **Mark as sent** and confirm. The lines lock, and a job that is Diagnosing or Quote needed moves to Awaiting approval.
- 5 When the customer decides, open the quotation and choose **Approve** or **Reject**. Approving moves a job that is Awaiting approval to Approved, so work can start.

Receive and count stock

- 1 Open **Stock** and pick the product under **Record a movement**.
- 2 Choose **Stock in** for deliveries, **Stock out** for items used or written off, or **Count** to set the quantity you counted.
- 3 Enter the quantity in whole units, add a **Reference** such as the PO number, and select **Record movement**.

B6 Dispatcher guide

You keep the day running: log calls, turn them into jobs, assign technicians, keep the schedule tidy and record progress as technicians report in.

Your day

- **Morning** — today's schedule and **Pending actions** on the Dashboard, then the **Unscheduled backlog** on Schedule.
- **As calls come in** — log a service request, review it, create a job.
- **Through the day** — update job statuses as technicians call in; add notes.
- **Before you leave** — check tomorrow on the Schedule and follow up jobs On hold.

YOUR SIDEBAR

OVERVIEW

- Dashboard

OPERATIONS

- Customers
- Service requests
- Jobs
- Schedule

Step by step

Log a call

- 1 Open **Service requests** → **New request**.
- 2 Choose the **Customer** (add them under Customers first if they're new) and the **Service type**.
- 3 Enter a **Title**, a **Description** of at least 10 characters and the **Priority**, then select **Log request**.

Turn a request into a job

- 1 Open the request. Select **Start review** while you assess it (optional).
- 2 Select **Create job**. Customer, service type, title, description and priority are copied from the request.
- 3 Enter the **Service location** (the full address) and select **Create job**. The request becomes Converted to job and links to the new job.

Dispatch a job

- 1 Open the job and find the **Dispatch** card.
- 2 Choose a **Technician** and, if known, the **Visit date and time** (your organization's timezone).
- 3 Select **Assign technician**. The job becomes Assigned and appears on the Schedule. Without a time it waits in the **Unscheduled backlog**.

Record progress from the field

- 1 When the technician calls in, open the job's **Job status** card. It lists only the statuses the job can move to next.
- 2 Optionally type a **Note for the activity log**, then select the button for the new status — for example **Mark accepted**, **Mark en route**, **Mark arrived** or **Mark completed**.
- 3 The change saves straight away and is listed under **Activity** with the time and who made it.

Change the time or technician

- Use **Update dispatch** on the Dispatch card. If the job was already Accepted, it goes back through Rescheduled to Assigned so the technician can accept again.
- Dispatch locks once the technician is En route.

Pause, cancel or close a job

- **On hold** pauses work; choose **In progress** to continue. An in-progress job can't be cancelled directly — put it on hold first.
- **Cancelled** ends the job permanently; you're asked to confirm (**Keep job** backs out).
- When the job shows Paid, choose **Closed** to finish it.

Rejected is final

If a technician can't take a job, assign someone else with **Update dispatch** rather than choosing **Rejected**.
Rejected is final: the job can't be dispatched again.

Good to know

- Accepted, En route, Arrived and In progress need an assigned technician.
- Invoiced, Partially paid and Paid are set automatically by invoices and payments.
- You can see a job's quotations and invoices in its **Billing** card, but opening them needs a billing role.
- Notes are internal and can't be edited after posting.

B7 Technician guide

In this release the web admin gives technicians a personal, read-only dashboard of their own work. Your dispatcher records your progress on each job.

YOUR SIDEBAR

OVERVIEW

- Dashboard

What you see

- **My scheduled jobs** — how many visits you have on the selected day.
- **My schedule** — your visits that day, with their times.
- **Pending actions** and **Recent jobs** — for your own assigned jobs only.
- Use the date picker to look at another day, and **Refresh** to update.

Before your dashboard shows anything

- 1 An Owner or Administrator invites you with the **Technician** role and sends you the link.
- 2 You accept the invitation (A4).
- 3 A Manager creates your technician profile (C3). Until then — or while your profile is Inactive — your dashboard stays empty.

How your progress is recorded

Tell your dispatcher when you accept a visit, set off, arrive, need a quotation, start, pause or finish. They update the job in ServiceFlow, and your dashboard reflects the change.

Note

A technician mobile app is not part of this release. In the web admin you can't open job pages, customers or other modules.

B8 Accountant guide

You look after the money: quotations, invoices and payments, plus the billing snapshot on your dashboard.

Your day

- Check the dashboard's **Billing** card: quotations awaiting a decision, open invoices and their amount, overdue invoices, money collected in the last 30 days.
- Record customer decisions on sent quotations.
- Invoice completed work and record payments as they arrive.
- Follow up overdue invoices.

YOUR SIDEBAR

OVERVIEW

- Dashboard

SALES & BILLING

- Quotations
- Invoices
- Payments

Step by step

Approve or reject a quotation

- 1 Open **Quotations**, filter by **Sent** and open the quotation.
- 2 Choose **Approve** or **Reject** and confirm. Approval moves a linked job to Approved.

Turn an approved quotation into an invoice

- 1 Open the approved quotation, select **Convert to invoice** and confirm.
- 2 A draft invoice opens with the same customer, job and lines. Change it with **Edit invoice** if needed.
- 3 Select **Issue invoice** and confirm. The due date is set, tracked products are deducted from stock and a linked job moves to Invoiced.

Important

A linked job must be **Completed** before its invoice can be issued. If issuing is refused, ask the dispatcher to complete the job first.

Create an invoice for a customer

- 1 Open **Invoices** → **New invoice**.
- 2 Choose the **Customer**, add a **Title**, an optional **Due date** and the lines, then select **Create invoice**.
- 3 Review the draft and select **Issue invoice**.

Invoices started this way are for the customer only. To link an invoice to a job, convert the job's approved quotation, or ask an Owner or Administrator to use **New invoice** on the job page.

Record a payment

- 1 Open an invoice that is Issued or Partially paid.
- 2 In **Payments**, enter the **Amount** (up to the balance due), the **Method**, when it was received and an optional **Reference**.
- 3 Select **Record payment**. The invoice becomes Partially paid or Paid, and a linked job follows.

Void an invoice or follow up overdue ones

- Drafts, and issued invoices with no payments, can be voided with **Void**. Stock deducted at issue is returned; a linked job keeps its status.
- Invoices past their due date with a balance show an **overdue** badge; the dashboard's **Overdue invoices** row counts them.

Good to know

- Payments are final — they can't be edited or deleted, and an invoice with payments can't be voided.
- Links from documents to customer, product or job pages open a "not found" page for your role; the details you need are on the document itself.
- If issuing is refused because of low stock, ask a Manager to receive stock first.

PART C

Module reference

One section per module, in sidebar order. Each starts with who can use it and where to find it, then explains its fields, statuses, rules and step-by-step tasks.

Section	What you'll find
C1	Dashboard
C2	Customers
C3	Technicians
C4	Service types
C5	Service requests
C6	Jobs
C7	Schedule
C8	Quotations
C9	Invoices
C10	Payments
C11	Products
C12	Stock
C13	Organization settings
C14	Team
C15	Settings (workspace defaults)

Where to start

Every module section opens with a summary box — who can use it, where it is in the sidebar and what it's for — so you can tell at a glance whether it applies to you.

C1 Dashboard

Who can use it	Everyone — content depends on role
Where	/dashboard · Overview → Dashboard
Use it to	See today's work, what needs attention and how billing stands, at a glance.

Panel	What it shows	Who sees it
Date picker and Refresh	The day being summarised, in your organization's timezone.	Everyone
Scheduled jobs	Jobs with a visit time on the selected day.	Owner, Administrator, Manager, Dispatcher
Tracked technicians	Technicians who are Available, Busy, Offline or On leave.	Owner, Administrator, Manager, Dispatcher
Open requests	Service requests that are New or Reviewing.	Owner, Administrator, Manager, Dispatcher
Outstanding	Balance due on open invoices, with the number of open and overdue invoices.	Owner, Administrator, Accountant
Today's schedule	Up to 12 visits on the selected day, in time order.	Owner, Administrator, Manager, Dispatcher
Pending actions	How many jobs are New, Awaiting approval and On hold.	Owner, Administrator, Manager, Dispatcher
Recent jobs	The 8 most recently created jobs.	Owner, Administrator, Manager, Dispatcher
Technician availability	Up to 8 technicians with their current status.	Owner, Administrator, Manager, Dispatcher
Billing	Quotations awaiting a decision, open invoices and their amount, overdue invoices, and payments collected in the last 30 days. Each row opens the matching list.	Owner, Administrator, Accountant
My scheduled jobs, My schedule, Pending actions, Recent jobs	The same panels, limited to the technician's own assigned jobs.	Technician

- The dashboard is read-only: open the module to act on anything you see.
- If one panel can't load, it shows a message with **Refresh** while the rest of the dashboard keeps working.
- "Overdue" means the due date has passed in your organization's timezone and a balance remains.

C2 Customers

Who can use it	Owner Administrator Manager Dispatcher
Where	/customers · Operations → Customers
Use it to	Keep one record per customer so their requests, jobs, quotations and invoices all point to the same place.

Fields

Field	What to enter	Good to know
Customer name *	2–120 characters, on one line.	Search finds customers by the beginning of the name.
Customer type	Individual or Business.	
Phone number *	7–15 digits; +, spaces, brackets, dots and dashes are allowed.	
Email address	Optional.	
Internal notes	Up to 2,000 characters.	Visible to your team only.
Active customer	Ticked for new customers.	Inactive customers can't be chosen for new requests, jobs, quotations or invoices.
Customer number	Assigned automatically, e.g. CUS-000001.	Can't be changed.

How to

Add a customer

- 1 Open **Customers** → **Add customer**.
- 2 Fill in the fields and select **Create customer**. The customer's page opens.

Find, edit or retire a customer

- Search by the beginning of the name and filter by **Status** (All customers, Active, Inactive).
- On the customer's page choose **Edit customer**, make your changes and **Save changes**.
- To retire a customer, untick **Active customer**. Their history stays; they just can't be picked for new work.

Note

Jobs and issued documents keep the customer's name as it was when they were created, so renaming a customer doesn't rewrite old paperwork.

C3 Technicians

Who can use it	Owner Administrator Manager
Where	/technicians · Operations → Technicians
Use it to	Create a profile for each field technician so they can be dispatched, appear on the schedule and see their own work.

A technician profile is linked to a team member's sign-in. Invite the person with the **Technician** role first (C14); once they accept, they appear in the member list here.

Fields

Field	What to enter	Good to know
Team member *	Chosen from active members with the Technician role who don't have a profile yet.	Links the profile to their sign-in; it can't be changed later.
Display name *	2–120 characters.	Shown on jobs, the schedule and the dashboard.
Phone number	Optional; 7–15 digits.	
Status	Available, Busy, Offline, On leave or Inactive.	New profiles start as Offline.
Employee number	Assigned automatically, e.g. TEC-000001.	

Technician statuses

Status	Meaning	Can be dispatched?
Available	Free for work.	Yes
Busy	Currently on a job.	Yes
Offline	Not working right now.	Yes
On leave	Away for a period.	Yes — check before assigning
Inactive	No longer working for you.	No — hidden from dispatch and the schedule

- Statuses are set by hand on the technician's profile; dispatching a job doesn't change them.
- Add a profile with **Add technician** → choose the member → **Create technician**. Change it later with **Edit technician**.
- A technician whose profile is Inactive sees an empty dashboard.

C4 Service types

Who can use it	Owner Administrator Manager
Where	/service-types · Operations → Service types
Use it to	Define the kinds of work you offer and how long a visit usually takes.

Fields

Field	What to enter	Good to know
Name *	2–120 characters, unique in your workspace (including inactive types; capitals and spacing are ignored).	For example AC repair or Solar inspection.
Description	Optional, up to 500 characters.	What the service covers.
Estimated duration (minutes) *	5–1,440.	Copied onto jobs and shown on schedule visits as “~90 min”. It’s an estimate, not a price.
Active service type	Ticked for new types.	Inactive types can’t be chosen for new requests or jobs; existing ones keep them.

- 1 Open **Service types** → **Add service type**.
- 2 Enter the name, description and estimated duration, then select **Create service type**.
- 3 To change or retire one later, open it, choose **Edit service type** and **Save changes**.

C5 Service requests

Who can use it	Owner Administrator Manager Dispatcher
Where	/service-requests · Operations → Service requests
Use it to	Capture what a customer asked for before it becomes scheduled work.

Fields

Field	What to enter	Good to know
Customer *	An active customer.	Search by the beginning of the name.
Service type *	An active service type.	Shows its estimated duration.
Title *	3–160 characters.	For example “Boiler leaking in plant room”.
Description *	10–4,000 characters.	Everything the team needs to know.
Priority	Low, Normal, High or Urgent.	See below.

Priorities

Priority	Use it when
Low	The work can wait for a convenient slot.
Normal	Handle it in the usual order.
High	Schedule it ahead of normal work.
Urgent	It needs attention as soon as possible.

Statuses and actions

Status	Meaning	What you can do
New	Logged and waiting for review.	Start review, Edit request, Create job, Cancel request
Reviewing	Being assessed before scheduling.	Edit request, Create job, Cancel request
Converted to job	Now tracked as a job.	View job
Cancelled	Closed without scheduling; kept for reference.	Nothing — the record is read-only.

Log a request and turn it into a job

- 1 **Service requests** → **New request**: choose the customer and service type, enter title, description and priority, then **Log request**.
- 2 Open the request and select **Start review** while you assess it (optional).
- 3 Select **Create job**, enter the **Service location** and select **Create job**. The request becomes Converted to job.
- 4 To drop a request instead, choose **Cancel request** and confirm (**Keep request** backs out).

Requests can be edited only while New or Reviewing, and each request becomes at most one job. The list shows the newest first (title order while searching) and can be filtered by status and priority.

C6 Jobs

Who can use it	Owner Administrator Manager Dispatcher
Where	/jobs · Operations → Jobs
Use it to	Plan, dispatch and track every piece of field work from creation to closure.

Create a job

- **New job** on the Jobs page: choose the customer and service type, then enter the title, description, priority and **Service location**.
- **Create job** on a service request: details are copied from the request; you only add the service location.

Field	What to enter	Good to know
Customer / Service type *	Active records from your workspace.	Fixed for jobs created from a request.
Title *	3–160 characters.	
Description *	10–4,000 characters.	
Priority	Low, Normal, High or Urgent.	
Service location *	5–1,000 characters.	The full address the technician will visit.
Job number	Assigned automatically from your Job prefix, e.g. JOB-000001.	

Job details can be edited with **Edit job** only while the job is New.

The job page

Card	What it's for
Work details	Customer, service type and its estimated duration, service location, description and the source request.
Dispatch	Assign a technician and a visit time.
Notes	Internal notes for your team, newest first.
Job status	The current status and the next statuses you can choose.
Billing	Quotations and invoices for this job, with shortcuts to create them.
Activity	Audit trail of every change: what changed, when and by whom — including changes made automatically by quotations, invoices and payments.

Dispatching

- Choose a **Technician** (active profiles only) and, optionally, a **Visit date and time** in 5-minute steps, in your organization's timezone. Select **Assign technician** — or **Update dispatch** if the job is already assigned.
- A New job becomes Assigned. Leaving the time empty keeps the job in the Schedule's **Unscheduled backlog**.
- Changing the technician or time of an Accepted job sends it back through Rescheduled to Assigned for acceptance.
- Dispatch is available while the job is New, Assigned, Rescheduled or Accepted, and locked from En route onwards.

The job lifecycle

The main path a job follows. Each box is a status badge you'll see on the job; the colour shows how the status is set.

Other moves

From	Move to	When
Arrived	In progress	No diagnosis needed.
Diagnosing	In progress	No quotation needed.
Assigned or Accepted	Rescheduled, then Assigned via the Dispatch card	A new time or technician is needed.
Diagnosing or In progress	On hold, then back to In progress	Work is paused (waiting for parts, access...).
Assigned	Rejected — final	The technician declined. Prefer re-dispatching to someone else.
Any status up to Approved, plus On hold and Rescheduled	Cancelled — final	The job won't go ahead. In progress jobs must go On hold first.

All job statuses

Status	Meaning	Can move to
New	Created; not yet dispatched.	Assigned (Dispatch card), Cancelled
Assigned	A technician is assigned.	Accepted, Rejected, Rescheduled, Cancelled
Accepted	The technician accepted the visit.	En route, Rescheduled, Cancelled
Rescheduled	A new time or technician is needed.	Assigned (Dispatch card), Cancelled
Rejected	The technician declined.	Final
En route	Travelling to the site.	Arrived, Cancelled
Arrived	On site.	Diagnosing, In progress, Cancelled
Diagnosing	Assessing the work before starting.	Quote needed, In progress, On hold, Cancelled
Quote needed	A quotation must be prepared and approved.	Awaiting approval, Cancelled
Awaiting approval	Quotation sent; waiting for the customer.	Approved, Cancelled
Approved	The customer approved the quotation.	In progress, Cancelled
In progress	Work has started.	On hold, Completed
On hold	Paused.	In progress, Cancelled
Completed	Work finished; ready to invoice.	Invoiced (by issuing an invoice)
Invoiced	An invoice has been issued.	Partially paid, Paid (by payments)
Partially paid	Part of the invoice is paid.	Paid (by payments)
Paid	Fully paid.	Closed
Closed	Paid and closed; no further changes.	Final
Cancelled	The job won't go ahead; kept for reference.	Final

Accepted, En route, Arrived and In progress need an assigned technician. Cancelled and Rejected ask you to confirm because they can't be undone.

Notes, billing and finding jobs

- **Notes** — type in the note box and select **Add note**. Notes are internal, up to 2,000 characters, and can't be edited or deleted.
- **Billing card** — lists the job's quotations and invoices with status and amounts. **New quotation** appears for Owners, Administrators and Managers while the job is Diagnosing, Quote needed, Awaiting approval, Approved, On hold or In progress. **New invoice** appears for Owners and Administrators once the job is Completed, Invoiced or Partially paid.
- **Finding jobs** — search by the beginning of the **Job title** and filter by **Status** and **Priority**; newest first.

C7 Schedule

Who can use it	Owner Administrator Manager Dispatcher
Where	/schedule · Operations → Schedule
Use it to	See who is going where and when, and find jobs that still need a visit time.

Part of the page	What it does
Day / Week	Switch between one day and a seven-day view. The week starts on the day chosen in Settings.
Previous · Today · Next	Move through days or weeks.
Technician	Show All technicians or one technician.
Day view lanes	One lane per technician who is Available, Busy, Offline or On leave, plus Unassigned visits for visits whose technician profile is no longer active.
Visit card	Time, status, priority, title, job number, customer and estimated duration. Select it to open the job.
Page header	Your organization's timezone and working hours (from Settings).
Unscheduled backlog	Open jobs (New, Assigned or Rescheduled) with no visit time, newest first. Open one and give it a time in the Dispatch card.

- To move a visit, open the job and change its time or technician in the **Dispatch** card.
- Times are always shown in the organization's timezone, whatever the viewer's computer is set to.

C8 Quotations

Who can use it	Owner Administrator Manager Accountant
Where	/quotations · Sales & billing → Quotations
Use it to	Price work before it starts, record the customer's decision and turn approved quotations into invoices.

Create a quotation

- **New quotation** on the Quotations page — for any active customer.
- **New quotation** on a job's Billing card — the customer and job are filled in and fixed.

Field	What to enter	Good to know
Customer *	An active customer, or fixed by the job.	
Title *	2–120 characters.	Shown in lists and on the document.
Valid until	A date, or leave it empty.	Empty means today plus the Quote validity days in Settings.
Notes	Up to 1,000 characters.	Terms, scope or payment details.

Field	What to enter	Good to know
Line items *	1–100 lines, each with a Description (up to 300 characters), Qty (more than 0, up to 3 decimals), Unit price (2 decimals, before tax) and Tax % (0–100).	New lines start with the workspace default tax rate. Subtotal, Tax and Total update as you type.

Add from catalog searches active products and adds a line with the product's name, price and tax rate (or the workspace default if the product uses it). **Add custom line** adds a blank line. Quotations take the workspace currency when they are created and are numbered from your Quote prefix, e.g. QUO-000001.

Statuses and actions

Status	Meaning	Actions
Draft	Being prepared; the lines can be edited.	Edit quotation, Mark as sent
Sent	With the customer; the lines are locked.	Approve, Reject
Sent · past validity	Sent, and the Valid until date has passed.	Approve, Reject, Mark expired
Approved	The customer accepted.	Convert to invoice (once; invoice roles only)
Rejected	The customer declined.	—
Expired	Closed without a decision.	—

Effect on a linked job

When you...	A job that is...	...moves to
Mark as sent	Diagnosing or Quote needed	Awaiting approval
Approve	Awaiting approval	Approved
Reject or Mark expired	—	No change; the dispatcher decides what happens next.
Convert to invoice	—	No change; the invoice moves the job when it is issued.

- A job can have only one Sent or Approved quotation at a time. Reject or expire the current one before sending another.
- Converting creates one draft invoice with the same customer, job and lines. It needs an Owner, Administrator or Accountant.

C9 Invoices

Who can use it	Owner Administrator Accountant
Where	/invoices · Sales & billing → Invoices
Use it to	Bill customers, issue invoices with due dates and track what is still owed.

Three ways to create an invoice

- **New invoice** on the Invoices page — for any active customer (not linked to a job).
- **Convert to invoice** on an approved quotation — copies its customer, job and lines.
- **New invoice** on a job's Billing card — Owners and Administrators, once the job is Completed, Invoiced or Partially paid.

Fields and line items work exactly as on quotations (C8), except **Due date**: leave it empty to have it set when the invoice is issued (issue date plus the Invoice due days in Settings). Invoices are numbered from your Invoice prefix, e.g. INV-000001.

Statuses and actions

Status	Meaning	Actions
Draft	Being prepared; can be edited.	Edit invoice, Issue invoice, Void
Issued	Sent to the customer; lines locked.	Record payment; Void while no payment is recorded
Issued · overdue	The due date has passed with a balance.	Record payment
Partially paid	Some money has been received.	Record payment
Paid	The balance is zero.	—
Void	Cancelled; nothing is owed.	—

What happens when you issue

- The lines lock and the **Due date** is set if it was empty.
- Products that track stock are deducted in whole units. If there isn't enough stock, issuing is refused and nothing changes.
- A linked job must be Completed (or already invoiced); it moves to Invoiced.

Voiding

- Drafts, and issued invoices with no payments, can be voided. Stock deducted at issue is returned, the balance becomes zero, and a linked job keeps its status.

The invoice page

Shows the line items with Subtotal, Tax, Total, **Paid** and **Balance due**; the **Payments** card with the payment form and history; the status card with dates; and links to the source quotation and job.

C10 Payments

Who can use it	Owner Administrator Accountant
Where	/payments · Sales & billing → Payments (record payments on the invoice page)
Use it to	Record money received against invoices and see every payment in one ledger.

Record a payment

- 1 Open an invoice that is Issued or Partially paid.
- 2 In the **Payments** card, fill in the fields below and select **Record payment**.

Field	What to enter	Good to know
Amount *	More than 0 and up to the balance due, 2 decimals.	Starts with the full balance.
Method	Cash, Card, Bank transfer, UPI, Cheque or Other.	Starts with Bank transfer.
Received on	Date and time, in your organization's timezone.	Starts with now.
Reference	Optional, up to 120 characters.	Transaction ID, cheque number...
Notes	Optional, up to 500 characters.	

What a payment changes

Record	Before	After
Invoice	Issued	Partially paid — or Paid when the balance reaches zero
Invoice	Partially paid	Paid when the balance reaches zero
Linked job	Invoiced	Partially paid — or Paid
Linked job	Partially paid	Paid

The payment ledger

- Lists payments newest first by when they were received, 50 per page, with a total for the page.
- Filter by **Method**; each row links to its invoice.
- Payments are final: they can't be edited or deleted, so record the exact amount received. Saving the same payment twice by accident records it once.

C11 Products

Who can use it	Owner Administrator Manager
Where	/inventory/products · Inventory → Products
Use it to	Keep a catalog of the parts, materials and services you sell, with prices, tax and stock levels.

Fields

Field	What to enter	Good to know
Name *	2–120 characters.	Search finds products by the beginning of the name.
SKU *	2–40 characters: letters, numbers, dots, hyphens, underscores or slashes.	Unique in your workspace and saved in capitals: pipe-cu-15 becomes PIPE-CU-15.
Description	Optional, up to 500 characters.	
Unit *	Up to 16 characters, e.g. pc, hr, m, kg.	
Unit price *	0 or more, 2 decimals, before tax.	Document lines can override it.
Tax rate (%)	0–100, or tick Use workspace default .	The default follows Settings.
Track stock	Ticked for physical items.	Untick for services and labour.
Reorder level	A whole number.	The product shows Low stock at or below it.
Active product	Ticked for new products.	Inactive products stay on existing documents but can't be picked for new ones.

Stock badges

Badge	Meaning
In stock	Tracked, and above the reorder level.
Low stock	Tracked, at or below the reorder level.
Out of stock	Tracked, with nothing on hand.
Not tracked	Stock isn't tracked for this product.

- The product page shows its details, a **Record a stock movement** form, the last 10 movements and a **Stock** card with quantity on hand, reorder level and stock value (on hand × unit price). **Stock history** opens the ledger for the product.
- Filter the list by **Status** and by **Stock** (Any, Tracked, Low or out of stock).
- Quantity on hand only changes through stock movements and invoices — never by editing the product.

C12 Stock

Who can use it	Owner Administrator Manager
Where	/inventory/stock · Inventory → Stock
Use it to	Record stock coming in and going out, correct counts, and see every movement in one ledger.

Record a movement

Field	What to enter
Product *	An active product that tracks stock.
Movement type	Stock in — received or returned. Stock out — used, sold or written off. Count — set the quantity you counted.
Quantity *	Whole units. For a Count, the counted quantity (it can be 0).
Reference	Optional, up to 120 characters: PO number, delivery note, job...
Reason	Optional, up to 300 characters.

Reading the ledger

Column	Shows
When	Date and time of the movement.
Product	Name and SKU; opens the product.
Movement	Stock in, Stock out or Count adjustment, and its source: Recorded manually, Invoice issued or Invoice voided.
Change / After	The change in quantity (e.g. +25, -4) and the quantity on hand afterwards.
Reference	The reference and reason, and who recorded it. Invoice movements link to the invoice.

- The **Low stock** panel lists active products at or below their reorder level.
- Stock can't go below zero: a Stock out larger than the quantity on hand is refused.
- Movements can't be edited or deleted. Fix a mistake with a new movement or a **Count**.
- Issuing an invoice deducts tracked products automatically; voiding it returns them.

C13 Organization settings

Who can use it	Owner
Where	/settings/organization · Administration → Organization
Use it to	Set your organization's name, timezone and the prefixes used for job, invoice and quotation numbers.

Field	What to enter	Good to know
Organization name *	2–120 characters.	Shown across ServiceFlow.
Workspace slug	Read-only.	Identifies your workspace.
Timezone *	For example Asia/Kolkata.	Used for the dashboard's day, the schedule, visit times, quote validity, invoice due dates and payment times.
Job prefix, Invoice prefix, Quote prefix *	2–8 characters: letters, numbers, hyphens or underscores; saved in capitals.	Applies to numbers issued after the change; the running sequence continues.

Select **Save changes**; "Changes saved" confirms it.

C14 Team

Who can use it	Owner Administrator
Where	/settings/team · Administration → Team
Use it to	Invite colleagues, set their roles and control who can sign in.

- **Members** lists everyone with their email, role and status. Change a role with the role list on the row; **Suspend** and **Reactivate** control access. Rows marked **Workspace owner** or **This is you** can't be changed.
- **Invite a team member** — enter an email, choose Administrator, Manager, Dispatcher, Technician or Accountant, and select **Create invitation link**. The link is shown once: copy it and send it yourself.
- **Pending invitations** expire after 7 days. **Regenerate link** issues a fresh link (the old one stops working); **Revoke** cancels the invitation.

Situation	What happens
Inviting someone who is already a member	Refused — they already have access.
Inviting an email that has a pending invitation	Refused — regenerate the existing invitation's link instead.
Inviting someone whose membership is suspended	Refused — reactivate them instead.
Changing the Owner, or your own role or access	Not possible from the Team page.
Suspending a member	Access ends at once; records they created keep their name.

C15 Settings (workspace defaults)

Who can use it	Owner
Where	/settings · Administration → Settings
Use it to	Set the defaults used by quotations, invoices, payments and the schedule.

Field	What to enter	Where it's used
Currency	USD, EUR, GBP, INR, AED, AUD, CAD, SGD, ZAR, JPY or BRL.	New quotations and invoices (and their payments). Existing documents keep their currency.
Default tax rate (%)	0–100, up to 2 decimals.	The starting tax rate for new lines, and for products set to use the workspace default.
Quote validity (days)	1–365.	The Valid until date when a quotation leaves it empty.
Invoice due (days)	0–365.	Due date = issue date + this many days, unless the invoice sets one. 0 means due on issue.
Opens / Closes	24-hour times; closing must be after opening.	Shown as working hours on the Schedule.
Week starts on	Monday or Sunday.	The first day of the Schedule's week view.

Select **Save changes**; "Changes saved" confirms it. Changes apply to documents created afterwards.

PART D

Workflows & help

See how the modules fit together, look up any status or term, fix common problems, and check what this release doesn't do yet.

Section	What you'll find
D1	From call to closed job: a complete example
D2	Status glossary
D3	Key terms
D4	Troubleshooting
D5	Owner setup checklist and known limitations

Where to start

Training someone new? Walk through D1 together in your own workspace — it touches every role and almost every module.

D1 From call to closed job

Acme Hotels calls about a leaking boiler. This is how the work moves through ServiceFlow, and who does what.

	Who	Where	What they do	Result
1	Dispatcher	Service requests → New request	Logs the call: Acme Hotels, service type Boiler service, priority High → Log request .	Request: New
2	Dispatcher	Request page	Start review , then Create job and adds the service location.	Request: Converted to job · Job JOB-000007: New
3	Dispatcher	Job → Dispatch	Chooses technician Tess and tomorrow 10:30 → Assign technician .	Job: Assigned · visit on the Schedule
4	Dispatcher	Job → Job status	As Tess reports in: Accepted → En route → Arrived → Diagnosing.	Each step in Activity
5	Manager	Job → Billing → New quotation	Adds a part from the catalog and 2 hours of labour → Create quotation → Mark as sent .	Quotation: Sent · Job: Awaiting approval
6	Manager or Accountant	Quotation page	The customer agrees → Approve .	Quotation: Approved · Job: Approved
7	Dispatcher	Job → Job status	In progress, then Completed when the work is done.	Job: Completed
8	Accountant	Quotation → Convert to invoice	Checks the draft → Issue invoice .	Invoice: Issued, due date set · stock deducted · Job: Invoiced
9	Accountant	Invoice → Payments	Records ₹5,000 by UPI, later the balance by bank transfer.	Invoice and job: Partially paid, then Paid
10	Dispatcher	Job → Job status	Chooses Closed.	Job: Closed

Shortcuts

No quotation needed? Go straight from Arrived or Diagnosing to **In progress**, and after **Completed** an Owner or Administrator can raise the invoice from the job's Billing card.

The job's **Activity** card shows the whole story, including the status changes made automatically by the quotation, the invoice and the payments.

D2 Status glossary

Job statuses are listed in full in C6. The other statuses are below.

Service requests

Status	Meaning
New	Logged and waiting for review.
Reviewing	Being assessed before scheduling.
Converted to job	Now tracked as a job.
Cancelled	Closed without scheduling; kept for reference.

Quotations

Status	Meaning
Draft	Being prepared.
Sent	With the customer; lines locked.
Sent · past validity	Sent, and the Valid until date has passed.
Approved	Accepted by the customer.
Rejected	Declined by the customer.
Expired	Closed without a decision.

Invoices

Status	Meaning
Draft	Being prepared.
Issued	Sent; payment expected by the due date.
Partially paid	Some money received.
Paid	Nothing left to pay.
Void	Cancelled.
Issued · overdue	Past the due date with a balance.

Stock movements and team

Status	Meaning
Stock in	Units received or returned.
Stock out	Units used, sold or written off.
Count adjustment	Quantity set from a count; the ledger records the difference.
Active member	Can sign in with their role.
Suspended member	Can't sign in until reactivated.
Pending invitation	Link created, not yet accepted; expires after 7 days.

D3 Key terms

Term	Meaning
Workspace / organization	Your business in ServiceFlow. Every record belongs to it.
Member	A person who can sign in to your workspace, with one role.
Role	Owner, Administrator, Manager, Dispatcher, Technician or Accountant — decides what a member can see and do.
Technician profile	The record that lets a Technician member be dispatched and scheduled.
Service type	A kind of work you offer, with an estimated duration.
Service request	What a customer asked for, captured before it becomes work.
Job	A piece of field work with a service location, technician, visit time and status.
Dispatch	Assigning a technician and a visit time to a job.
Visit time	When the technician is expected on site, in your organization's timezone.
Unscheduled backlog	Open jobs that don't have a visit time yet.
Quotation	A priced offer the customer approves before work starts.
Invoice	A bill for work done. Issuing it sets the due date and deducts tracked stock.
Balance due	Invoice total minus payments received.
Payment	Money received against an invoice. Payments are final.
Product · SKU	A catalog item, and its unique code.
Stock movement	Any change to a product's quantity on hand.
Reorder level	The quantity at or below which a product counts as low stock.
Prefix	The letters in front of job, invoice and quotation numbers, e.g. JOB in JOB-000001.

D4 Troubleshooting

What you see	Why	What to do
"...has changed since you opened the form."	Someone else saved the record first.	Open the latest version (link in the message) and re-apply your change.
"Your session has expired... Your entries are still here."	Your sign-in ended.	Sign in again in a new tab, come back and save.
"You don't have permission to..." or a "not found" page	Your role doesn't include that module.	See B2, or ask an Administrator.
A technician is missing from the dispatch list	Their profile is Inactive or doesn't exist yet.	A Manager reactivates or creates the profile (C3).
No members to choose under Add technician	Nobody with the Technician role is waiting for a profile.	Invite the person as Technician and wait for them to accept (C14).
"This job already has a sent or approved quotation..."	Only one active quotation per job.	Reject or expire the current one first.
"The linked job must be completed before this invoice can be issued."	The job isn't Completed yet.	Ask the dispatcher to complete the job, then issue.
"...does not have enough stock on hand for this quantity."	Tracked stock is lower than the invoice quantity.	Record a Stock in or correct the Count, then issue again.
"...tracks whole units. Use a whole-number quantity."	A tracked product has a fractional quantity.	Use whole numbers, or untick Track stock for that product.
"The amount is more than the balance due..."	The payment exceeds what is owed.	Enter up to the balance due.
"This invoice has payments recorded and cannot be voided."	Payments are final.	Settle any difference with the customer outside ServiceFlow.
"This SKU is already used..." / "This name is already used..."	Duplicates aren't allowed, even with inactive records.	Choose another value or edit the existing record.
"This link isn't valid anymore." (invitation)	The link expired, was used or was revoked.	Ask for a new link.
"This invitation was sent to a different email address..."	You're signed in with another email.	Sign in with the invited email.
"An invitation for this email is still pending..."	A link already exists for that email.	Regenerate the existing invitation's link.

D5 Owner setup checklist and known limitations

Setup checklist

Task	Where
☐ Set the organization name, timezone and number prefixes	Organization · C13
☐ Set currency, tax, quote validity, invoice due days, working hours and week start	Settings · C15
☐ Invite administrators, managers, dispatchers, technicians and accountants	Team · C14
☐ Create service types with estimated durations	Service types · C4
☐ Create technician profiles for accepted Technician members	Technicians · C3
☐ Add products and record opening stock with a Count	Products, Stock · C11–C12
☐ Add your regular customers	Customers · C2
☐ Run one job from request to payment with the team	All · D1

Known limitations in this release

- ServiceFlow doesn't send email yet: share invitation links, quotations and invoices yourself.
- There is no printable or PDF layout for quotations and invoices yet.
- There is no technician mobile app yet; dispatchers record field progress on the job page.
- Payments can't be edited, reversed or refunded, and there are no credit notes.
- Voiding an issued invoice doesn't change the linked job's status.
- Stock is counted in whole units at a single location.
- Quotations and invoices started from their own list pages aren't linked to a job; raise them from the job page to link them.
- Search matches the beginning of names and titles only.
- Ownership of a workspace can't be transferred in the app.
