

WEB ADMIN · TECHNICIAN APP · USER MANUAL

# ServiceFlow

How every role uses every module — from the first customer call to the final payment.

**NEW IN 1.4**

Technicians now see and update their jobs in the app — Part E.

FOR EVERY ROLE

Owner

Administrator

Manager

Dispatcher

Technician

Accountant

# Contents

Part B has a guide for each role, Part C describes every module and Part E covers the technician app. Section codes such as C6 are used for cross-references throughout.

## PART A

# Getting started

Everything you need before your first day: creating the workspace, signing in, joining a team by invitation, and finding your way around the screens.

| Section | What you'll find                                                          |
|---------|---------------------------------------------------------------------------|
| A1      | Welcome to ServiceFlow, how this manual is organised, and its conventions |
| A2      | Create your workspace (first owner only)                                  |
| A3      | Sign in, sign out and reset your password                                 |
| A4      | Join a workspace by invitation                                            |
| A5      | Find your way around: sidebar, page headers, lists and forms              |
| A6      | If you can't get in                                                       |

**Where to start**

Setting up a new business? Start with A2. Joining an existing team? Start with A4 — then read your role guide in Part B.

# A1 Welcome to ServiceFlow

ServiceFlow is the web admin your team uses to run field-service work in one shared workspace. Customers and their service requests come in, requests become jobs, jobs are dispatched to technicians and scheduled, quotations are sent and approved, invoices are issued and payments are recorded. Technicians can also sign in to the ServiceFlow app on their phones (Part E).

Everything you create belongs to your organization. Other businesses using ServiceFlow can never see your records, and inside your workspace each person only sees the modules their role allows.

## How this manual is organised

| Part                            | What's inside                                                                                                                      | Read it when                                          |
|---------------------------------|------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------|
| <b>A · Getting started</b>      | Creating the workspace, signing in, joining by invitation, the layout of every screen.                                             | You're new to ServiceFlow.                            |
| <b>B · Role guides</b>          | What each of the six roles sees and does, with a typical day and step-by-step tasks.                                               | Start with the guide for your own role.               |
| <b>C · Module reference</b>     | Every page in sidebar order: who can use it, fields, statuses, rules and how-tos.                                                  | You need the details of one module.                   |
| <b>D · Workflows &amp; help</b> | An end-to-end example, status glossary, key terms, troubleshooting, setup checklist and known limitations.                         | Training a new colleague, or something isn't working. |
| <b>E · Technician app</b>       | Setting up the phone app, signing in, your jobs and updating them from the site, the app's messages, and its languages and themes. | You're a technician, or you're rolling the app out.   |

## Conventions

- `/jobs` is the address of a page. Type it after your workspace's web address, or open the page from the sidebar.
- **Bold** marks buttons, links and field names exactly as they appear on screen.
- Status badges are drawn the way the app shows them, for example:

New Reviewing In progress Awaiting approval Completed Cancelled Draft

- Times you enter — visit times and payment times — use your organization's timezone, set by the Owner. Record dates such as **Created** and **Last updated** are shown in UTC; each page says which applies.
- Limits such as "2–120 characters" are the rules ServiceFlow checks when you save.

## A2 Create your workspace

The first person to register becomes the workspace **Owner**. Do this once for your business — everyone else joins by invitation (A4).

- 1 Open </register>.
- 2 Enter your **Full name**, **Company name** and **Work email**, choose a **Password** of at least 8 characters, type it again in **Confirm password**, and accept the terms.
- 3 Select **Create your workspace**. ServiceFlow creates your organization and makes you its Owner.
- 4 On the verification step, open the email from ServiceFlow and follow the link to verify your address.
- 5 Go to </login> and sign in. You arrive on the Dashboard — continue with the Owner's first-day setup in B3.

### Tip

Didn't receive the verification email? Try signing in anyway: ServiceFlow sends a fresh link and reminds you to check your spam folder.

## A3 Sign in, sign out and reset your password

- **Sign in** at </login> with your work email and password (at least 8 characters).
- A sign-in lasts up to 5 days on that browser. To leave, open the user menu in the top-right corner and choose **Sign out**.
- **Forgot password?** on the sign-in page opens </forgot-password>. Enter your work email and follow the reset link that is emailed to you.
- If a form tells you your session has expired, sign in again in a new tab, come back and save. Your entries stay in the form.
- Technicians also sign in to the **ServiceFlow technician app** on their phones with the same email and password (E3).

### Note

ServiceFlow starts a session only straight after you enter your password, and only for verified email addresses. If an administrator suspends your membership, your access ends on your next page load.

## A4 Join a workspace by invitation

Team members don't register a new workspace. An Owner or Administrator creates an invitation link for your email and role (C14) and sends it to you — ServiceFlow doesn't email invitations itself yet.

- 1 Open the invitation link. It shows the role you're invited as and the date the link stops working.
- 2 Choose **I have an account** to sign in with the invited email, or **Create an account** to set your name and a password.
- 3 New accounts verify their email first: open the verification email, return to the same invitation link and choose **Accept and sign in**.
- 4 You're signed in to the workspace with the role on the invitation.

### Invitation rules

An invitation link works **once**, for **7 days**, and only for the **email it was created for**.

If the browser is already signed in with another account, choose **Sign out and continue**. If you see **This link isn't valid anymore**, the link expired, was used or was revoked — ask for a new one.

## A5 Find your way around

### The workspace layout

- **Sidebar** — the modules your role can use, in five groups: Overview, Operations, Sales & billing, Inventory and Administration. On a phone or narrow window, open it with the menu button in the top bar.
- **Top bar** — your organization's name on the left, and your user menu with **Sign out** on the right.
- **Page header** — breadcrumbs, the page title and the page's main actions, such as **Add customer** or **New job**.

### Lists

- Search boxes match the **beginning** of a name or title: "boil" finds "Boiler service" but not "Annual boiler check".
- Choose filters, then **Apply filters**. **Clear** resets them.
- Lists show 25 records per page (50 on the stock and payment ledgers). Use **Next page** and **First page** to move through them.

### Forms

- Required fields are marked with \*. The hint under each field explains its rules; problems appear in red under the field.
- If a save fails, your entries stay in the form. If you try to leave with unsaved changes, the browser asks you to confirm.
- If two people edit the same record, the second save is refused with a message that the record has changed. Open the latest version (a link is offered), then re-apply your change.
- Pressing save twice, or retrying after a lost connection, never creates a duplicate record.

## A6 If you can't get in

| What you see                                            | What it means                                                                            | What to do                                                                                    |
|---------------------------------------------------------|------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------|
| "Your account isn't active in a ServiceFlow workspace." | Your membership is suspended, or your account has no active workspace.                   | Ask your Owner or an Administrator to reactivate you. Use <b>Sign out</b> to switch accounts. |
| "Verify your email before signing in..."                | Your email address isn't verified yet.                                                   | Open the newest verification email (check spam), then sign in again.                          |
| A "not found" page after following a link               | The page belongs to a module your role can't use, or the record isn't in your workspace. | Check the permission matrix (B2) or ask an Administrator.                                     |
| A sidebar item you expected is missing                  | Your role doesn't include that module.                                                   | See B2; roles are changed on the Team page (C14).                                             |

## PART B

# Role guides

ServiceFlow has six roles. Read the overview and the permission matrix, then the guide for your own role: what you see, a typical day and step-by-step tasks.

| Section | What you'll find                                   |
|---------|----------------------------------------------------|
| B1      | The six roles at a glance                          |
| B2      | Permission matrix: which role can use which module |
| B3      | Owner guide                                        |
| B4      | Administrator guide                                |
| B5      | Manager guide                                      |
| B6      | Dispatcher guide                                   |
| B7      | Technician guide                                   |
| B8      | Accountant guide                                   |

**Where to start**

Not sure which role you have? Look at your sidebar and compare it with the permission matrix in B2, or ask your Owner.

# B1 The six roles at a glance

Every member of your workspace has exactly one role. The role decides which sidebar items they see and what they can change. The Owner or an Administrator sets roles on the Team page (C14).

## Owner

### RUNS THE WORKSPACE

Created the workspace. Uses every module and is the only role that can change organization details and workspace defaults. One per workspace.

Typically the business owner.

## Administrator

### RUNS THE TEAM

Everything except Organization and Settings. Invites people, sets their roles, suspends leavers, and can work in every operations, billing and inventory module.

Typically the office or operations head.

## Manager

### RUNS OPERATIONS

Customers, technicians, service types, requests, jobs and the schedule, plus quotations, products and stock.

Typically a service manager or supervisor.

## Dispatcher

### RUNS THE DAY

Logs calls as service requests, turns them into jobs, assigns technicians, and keeps the schedule and job statuses up to date.

Typically the front desk or a coordinator.

## Technician

### DOES THE WORK

Works their assigned jobs in the technician app on their phone (Part E): accepts them, updates their progress, adds notes and completes them. Also sees their own jobs on a personal web dashboard.

Typically a field engineer.

## Accountant

### RUNS THE MONEY

Quotations, invoices and payments, plus the billing snapshot on the dashboard.

Typically the accounts team.

## B2 Permission matrix

A tick means the role can open the module and make changes in it. Sidebar items follow the same rules, so each person only sees what they can use.

| Module                                         | Owner | Admin | Manager | Dispatcher | Technician            | Accountant                 |
|------------------------------------------------|-------|-------|---------|------------|-----------------------|----------------------------|
| <b>Overview</b>                                |       |       |         |            |                       |                            |
| Dashboard: schedule, jobs, team and requests   | ✓     | ✓     | ✓       | ✓          | Own jobs <sup>1</sup> | —                          |
| Dashboard: billing snapshot                    | ✓     | ✓     | —       | —          | —                     | ✓                          |
| <b>Operations</b>                              |       |       |         |            |                       |                            |
| Customers                                      | ✓     | ✓     | ✓       | ✓          | —                     | Pick on forms <sup>3</sup> |
| Technicians                                    | ✓     | ✓     | ✓       | —          | —                     | —                          |
| Service types                                  | ✓     | ✓     | ✓       | —          | —                     | —                          |
| Service requests                               | ✓     | ✓     | ✓       | ✓          | —                     | —                          |
| Jobs (create, dispatch, statuses, notes)       | ✓     | ✓     | ✓       | ✓          | —                     | —                          |
| Schedule                                       | ✓     | ✓     | ✓       | ✓          | —                     | —                          |
| <b>Sales &amp; billing</b>                     |       |       |         |            |                       |                            |

| Sign in to the app on a phone <sup>4</sup>     | —     | —     | —       | —          | ✓                     | —                          |
| Own jobs: status steps, declines, notes        | —     | —     | —       | —          | ✓                     | —                          |

<sup>1</sup> Technicians see the dashboard panels for jobs assigned to their own technician profile only.

<sup>2</sup> Converting needs invoice access. Managers can create, send, approve and reject quotations, but an Owner, Administrator or Accountant turns them into invoices.

<sup>3</sup> Accountants can choose catalog products and customers on quotations and invoices without having the Products or Customers pages.

<sup>4</sup> Needs a technician profile that isn't Inactive. Other roles who sign in to the app are asked to use the web admin (E7).

**Note**

A role change takes effect on the person's next page load. Suspended members lose access immediately; their name stays on the records they created.

## B3 Owner guide

You created the workspace, so you can use every module. Only you can change the organization's details and the workspace defaults that every quotation, invoice and schedule relies on.

### Your week

- Glance at the **Dashboard**: today's schedule, pending actions and the **Billing** snapshot.
- Review **Team**: pending invitations, roles, and anyone who has left.
- Revisit **Settings** when your tax rate, payment terms or working hours change.

### Good to know

- Set the timezone before scheduling: visit times, the dashboard's day, quote validity and due dates all use it.
- Prefix changes affect new numbers only; the sequence continues (JOB-000041 → WRK-000042).
- Currency and tax changes apply to new documents; existing ones keep their values.
- Nobody can change the owner's access from the Team page, and ownership can't be transferred in the app.

- Settings

## First-day setup

- 1 **Organization** (/settings/organization) — check the organization name, choose your **Timezone**, and set the **Job prefix**, **Invoice prefix** and **Quote prefix**. See C13.
- 2 **Settings** (/settings) — choose the **Currency**, **Default tax rate**, **Quote validity**, **Invoice due days**, working hours and the day your week starts. See C15.
- 3 **Team** (/settings/team) — create invitation links for your administrators, managers, dispatchers, technicians and accountants, and send each link to its person. See C14.
- 4 **Service types** (/service-types) — list the work you offer with an estimated duration for each. See C4.
- 5 **Technicians** (/technicians) — once the people invited as Technician have accepted, create a technician profile for each. See C3.
- 6 **Products** and **Stock** — add the parts and services you sell, then record opening stock with a **Count**. See C11 and C12.
- 7 **Customers** (/customers) — add your regular customers, or let dispatchers add them as calls arrive. See C2.
- 8 Run one test job from request to payment (D1) so everyone sees the whole flow.

## B4 Administrator guide

You can do everything the Owner can except change Organization and workspace Settings. Your extra responsibility is the team: who can sign in, and with which role.

### Your day

- Handle requests to add, change or remove access on the **Team** page.
- Work in any operations, billing or inventory module when needed.
- Keep an eye on the dashboard's **Billing** snapshot.

### Good to know

- You can't change the Owner's access, or your own role and access — ask the Owner or another Administrator.
- Administrators can invite other Administrators.
- Existing members can't be invited again; reactivate a suspended member instead.

#### YOUR SIDEBAR

##### OVERVIEW

- Dashboard

##### OPERATIONS

- Customers
- Technicians
- Service types
- Service requests
- Jobs
- Schedule

##### SALES & BILLING

- Quotations

##### ADMINISTRATION

- Team

## Step by step

### Invite a colleague

- 1 Open **Team** (</settings/team>).
- 2 In **Invite a team member**, enter their email and choose a role: Administrator, Manager, Dispatcher, Technician or Accountant.
- 3 Select **Create invitation link**. The link is shown once — copy it now.
- 4 Send it to your colleague by email or chat. It works once, for 7 days, for that email only.
- 5 When they accept, they move from **Pending invitations** to **Members**.

### Change someone's role

- 1 On **Team**, find the person under **Members**.
- 2 Choose the new role in the role list on their row. It saves immediately and applies from their next page load. (Reactivate a suspended member before changing their role.)

### Suspend someone who's leaving

- 1 On **Team**, select **Suspend** on their row and confirm.
- 2 Their access ends at once; records they created keep their name. Select **Reactivate** to restore access later.

### Replace a lost or expired invitation link

- Under **Pending invitations**, choose **Regenerate link** and send the new link. The old link stops working.
- To cancel an invitation, choose **Revoke**.

# B5 Manager guide

You run day-to-day operations and keep the catalog right: customers, technicians, service types, requests, jobs and the schedule, plus quotations, products and stock.

## Your day

- Start on the **Dashboard**: today's schedule, **Pending actions** and technician availability.
- Work requests and jobs exactly like a dispatcher (B6) whenever needed.
- Price work that needs approval: raise quotations from jobs, send them, and record the customer's decision.
- Keep products and stock current and act on the **Low stock** panel.

## Good to know

- Keep each service type's **Estimated duration** realistic — it's copied onto jobs and shown on the schedule.
- You can approve quotations; converting one into an invoice needs an Owner, Administrator or Accountant.
- Invoices, payments, the team, settings and the dashboard's billing snapshot aren't part of your role.

## Step by step

### Add a technician profile

Before you start, the person must have accepted an invitation with the **Technician** role.

- 1 Open **Technicians** and select **Add technician**.
- 2 Choose the team member. Only active members with the Technician role who don't have a profile yet are listed.
- 3 Check the **Display name**, add a **Phone number** if you like, and set the **Status** (new profiles start as Offline).
- 4 Select **Create technician**. The profile gets an employee number such as TEC-000001 and can now be dispatched.

#### OPERATIONS

- Customers
- Technicians
- Service types
- Service requests
- Jobs
- Schedule

#### SALES & BILLING

- Quotations

#### INVENTORY

- Products
- Stock

### Raise and send a quotation for a job

- 1 Open the job. While it is Diagnosing, Quote needed, Awaiting approval, Approved, On hold or In progress, its **Billing** card shows **New quotation**.
- 2 The customer and job are already filled in. Add a **Title**, an optional **Valid until** date and **Notes**.
- 3 Add lines with **Add from catalog** (price and tax come from the product) or **Add custom line**. Totals update as you type.
- 4 Select **Create quotation**, check it, then choose **Mark as sent** and confirm. The lines lock, and a job that is Diagnosing or Quote needed moves to Awaiting approval.
- 5 When the customer decides, open the quotation and choose **Approve** or **Reject**. Approving moves a job that is Awaiting approval to Approved, so work can start.

### Receive and count stock

- 1 Open **Stock** and pick the product under **Record a movement**.
- 2 Choose **Stock in** for deliveries, **Stock out** for items used or written off, or **Count** to set the quantity you counted.
- 3 Enter the quantity in whole units, add a **Reference** such as the PO number, and select **Record movement**.

# B6 Dispatcher guide

You keep the day running: log calls, turn them into jobs, assign technicians, keep the schedule tidy and record progress as technicians report in.

## Your day

- **Morning** — today's schedule and **Pending actions** on the Dashboard, then the **Unscheduled backlog** on Schedule.
- **As calls come in** — log a service request, review it, create a job.
- **Through the day** — update job statuses as technicians call in; add notes.
- **Before you leave** — check tomorrow on the Schedule and follow up jobs On hold.

### YOUR SIDEBAR

#### OVERVIEW

- Dashboard

#### OPERATIONS

- Customers
- Service requests
- Jobs
- Schedule

## Step by step

### Log a call

- 1 Open **Service requests** → **New request**.
- 2 Choose the **Customer** (add them under Customers first if they're new) and the **Service type**.
- 3 Enter a **Title**, a **Description** of at least 10 characters and the **Priority**, then select **Log request**.

### Turn a request into a job

- 1 Open the request. Select **Start review** while you assess it (optional).
- 2 Select **Create job**. Customer, service type, title, description and priority are copied from the request.
- 3 Enter the **Service location** (the full address) and select **Create job**. The request becomes Converted to job and links to the new job.

### Dispatch a job

- 1 Open the job and find the **Dispatch** card.
- 2 Choose a **Technician** and, if known, the **Visit date and time** (your organization's timezone).
- 3 Select **Assign technician**. The job becomes Assigned and appears on the Schedule. Without a time it waits in the **Unscheduled backlog**.

### Record progress from the field

- 1 Technicians update their own jobs from the app (E5), and each change appears under **Activity** with their name. When a technician calls in instead, open the job's **Job status** card. It lists only the statuses the job can move to next.
- 2 Optionally type a **Note for the activity log**, then select the button for the new status — for example **Mark accepted**, **Mark en route**, **Mark arrived** or **Mark completed**.
- 3 The change saves straight away and is listed under **Activity** with the time and who made it.

## Change the time or technician

- Use **Update dispatch** on the Dispatch card. If the job was already Accepted, it goes back through Rescheduled to Assigned so the technician can accept again.
- Dispatch locks once the technician is En route.

## Pause, cancel or close a job

- **On hold** pauses work; choose **In progress** to continue. An in-progress job can't be cancelled directly — put it on hold first.
- **Cancelled** ends the job permanently; you're asked to confirm (**Keep job** backs out).
- When the job shows Paid, choose **Closed** to finish it.

### Rejected is final

If a technician can't take a job, assign someone else with **Update dispatch** rather than choosing **Rejected**. Rejected is final: the job can't be dispatched again.

A technician who taps **Decline** in the app sends the job back as Rescheduled, without a technician, with their reason in Activity. Re-dispatch it from the Dispatch card — on the Schedule it waits in the Unassigned lane, or in the backlog if it had no time.

## Good to know

- Accepted, En route, Arrived and In progress need an assigned technician.
- Invoiced, Partially paid and Paid are set automatically by invoices and payments.
- You can see a job's quotations and invoices in its **Billing** card, but opening them needs a billing role.
- Notes are internal and can't be edited after posting.

## B7 Technician guide

You use ServiceFlow in two places: the **technician app** on your phone (Part E), where you see your jobs and update each one as you work, and a personal, read-only dashboard of your own work in the web admin.

### YOUR SIDEBAR

#### OVERVIEW

- Dashboard

### What you see

- **My scheduled jobs** — how many visits you have on the selected day.
- **My schedule** — your visits that day, with their times.
- **Pending actions** and **Recent jobs** — for your own assigned jobs only.
- Use the date picker to look at another day, and **Refresh** to update.

### Before you can use ServiceFlow

- 1 An Owner or Administrator invites you with the **Technician** role and sends you the link.
- 2 You accept the invitation on the web and verify your email (A4).
- 3 A Manager creates your technician profile (C3). Until then — or while your profile is Inactive — your dashboard stays empty and the app explains what's missing.
- 4 Sign in to the technician app with the same email and password (E3).

### How your progress is recorded

Update each job in the technician app as you go: accept it, set off, arrive, ask for a quotation, start, pause or finish (E5). The office sees each change, with your name, on the job page, and your dashboard reflects it. No signal? Tell your dispatcher, who can update the job on the web.

#### Note

The technician app works in English, Hindi or Telugu (E8) and shows your jobs even without signal; changing a job needs a connection. In the web admin you can't open job pages, customers or other modules.

# B8 Accountant guide

You look after the money: quotations, invoices and payments, plus the billing snapshot on your dashboard.

## Your day

- Check the dashboard's **Billing** card: quotations awaiting a decision, open invoices and their amount, overdue invoices, money collected in the last 30 days.
- Record customer decisions on sent quotations.
- Invoice completed work and record payments as they arrive.
- Follow up overdue invoices.

### YOUR SIDEBAR

#### OVERVIEW

- Dashboard

#### SALES & BILLING

- Quotations
- Invoices
- Payments

## Step by step

### Approve or reject a quotation

- 1 Open **Quotations**, filter by **Sent** and open the quotation.
- 2 Choose **Approve** or **Reject** and confirm. Approval moves a linked job to Approved.

### Turn an approved quotation into an invoice

- 1 Open the approved quotation, select **Convert to invoice** and confirm.
- 2 A draft invoice opens with the same customer, job and lines. Change it with **Edit invoice** if needed.
- 3 Select **Issue invoice** and confirm. The due date is set, tracked products are deducted from stock and a linked job moves to Invoiced.

#### Important

A linked job must be **Completed** before its invoice can be issued. If issuing is refused, ask the dispatcher to complete the job first.

### Create an invoice for a customer

- 1 Open **Invoices** → **New invoice**.
- 2 Choose the **Customer**, add a **Title**, an optional **Due date** and the lines, then select **Create invoice**.
- 3 Review the draft and select **Issue invoice**.

Invoices started this way are for the customer only. To link an invoice to a job, convert the job's approved quotation, or ask an Owner or Administrator to use **New invoice** on the job page.

### Record a payment

- 1 Open an invoice that is Issued or Partially paid.
- 2 In **Payments**, enter the **Amount** (up to the balance due), the **Method**, when it was received and an optional **Reference**.
- 3 Select **Record payment**. The invoice becomes Partially paid or Paid, and a linked job follows.

### Void an invoice or follow up overdue ones

- Drafts, and issued invoices with no payments, can be voided with **Void**. Stock deducted at issue is returned; a linked job keeps its status.
- Invoices past their due date with a balance show an **overdue** badge; the dashboard's **Overdue invoices** row counts them.

### Good to know

- Payments are final — they can't be edited or deleted, and an invoice with payments can't be voided.
- Links from documents to customer, product or job pages open a "not found" page for your role; the details you need are on the document itself.
- If issuing is refused because of low stock, ask a Manager to receive stock first.

## PART C

# Module reference

One section per module, in sidebar order. Each starts with who can use it and where to find it, then explains its fields, statuses, rules and step-by-step tasks.

| Section | What you'll find              |
|---------|-------------------------------|
| C1      | Dashboard                     |
| C2      | Customers                     |
| C3      | Technicians                   |
| C4      | Service types                 |
| C5      | Service requests              |
| C6      | Jobs                          |
| C7      | Schedule                      |
| C8      | Quotations                    |
| C9      | Invoices                      |
| C10     | Payments                      |
| C11     | Products                      |
| C12     | Stock                         |
| C13     | Organization settings         |
| C14     | Team                          |
| C15     | Settings (workspace defaults) |

## Where to start

Every module section opens with a summary box — who can use it, where it is in the sidebar and what it's for — so you can tell at a glance whether it applies to you.

# C1 Dashboard

|                |                                                                             |

| <b>Recent jobs</b>                                                  | The 8 most recently created jobs.                                                                                                                               | Owner, Administrator, Manager, Dispatcher |
| <b>Technician availability</b>                                      | Up to 8 technicians with their current status.                                                                                                                  | Owner, Administrator, Manager, Dispatcher |
| <b>Billing</b>                                                      | Quotations awaiting a decision, open invoices and their amount, overdue invoices, and payments collected in the last 30 days. Each row opens the matching list. | Owner, Administrator, Accountant          |
| <b>My scheduled jobs, My schedule, Pending actions, Recent jobs</b> | The same panels, limited to the technician's own assigned jobs.                                                                                                 | Technician                                |

- The dashboard is read-only: open the module to act on anything you see.
- If one panel can't load, it shows a message with **Refresh** while the rest of the dashboard keeps working.
- "Overdue" means the due date has passed in your organization's timezone and a balance remains.

## C2 Customers

|                |                                                                                                            |
|----------------|------------------------------------------------------------------------------------------------------------|
| Who can use it | <a href="#">Owner</a> <a href="#">Administrator</a> <a href="#">Manager</a> <a href="#">Dispatcher</a>     |
| Where          | <a href="#">/customers</a> · Operations → Customers                                                        |
| Use it to      | Keep one record per customer so their requests, jobs, quotations and invoices all point to the same place. |

### Fields

| Field                  | What to enter                                                  | Good to know                                                                       |
|------------------------|----------------------------------------------------------------|------------------------------------------------------------------------------------|
| <b>Customer name *</b> | 2–120 characters, on one line.                                 | Search finds customers by the beginning of the name.                               |
| <b>Customer type</b>   | Individual or Business.                                        |                                                                                    |
| <b>Phone number *</b>  | 7–15 digits; +, spaces, brackets, dots and dashes are allowed. |                                                                                    |
| <b>Email address</b>   | Optional.                                                      |                                                                                    |
| <b>Internal notes</b>  | Up to 2,000 characters.                                        | Visible to your team only.                                                         |
| <b>Active customer</b> | Ticked for new customers.                                      | Inactive customers can't be chosen for new requests, jobs, quotations or invoices. |
| Customer number        | Assigned automatically, e.g. CUS-000001.                       | Can't be changed.                                                                  |

### How to

#### Add a customer

- 1 Open **Customers** → **Add customer**.
- 2 Fill in the fields and select **Create customer**. The customer's page opens.

#### Find, edit or retire a customer

- Search by the beginning of the name and filter by **Status** (All customers, Active, Inactive).
- On the customer's page choose **Edit customer**, make your changes and **Save changes**.
- To retire a customer, untick **Active customer**. Their history stays; they just can't be picked for new work.

#### Note

Jobs and issued documents keep the customer's name as it was when they were created, so renaming a customer doesn't rewrite old paperwork.

## C3 Technicians

|                |                                                                                                                      |
|----------------|----------------------------------------------------------------------------------------------------------------------|
| Who can use it | <a href="#">Owner</a> <a href="#">Administrator</a> <a href="#">Manager</a>                                          |
| Where          | <a href="#">/technicians</a> · Operations → Technicians                                                              |
| Use it to      | Create a profile for each field technician so they can be dispatched, appear on the schedule and see their own work. |

A technician profile is linked to a team member's sign-in. Invite the person with the **Technician** role first (C14); once they accept, they appear in the member list here.

### Fields

| Field                 | What to enter                                                                     | Good to know                                                   |
|-----------------------|-----------------------------------------------------------------------------------|----------------------------------------------------------------|
| <b>Team member *</b>  | Chosen from active members with the Technician role who don't have a profile yet. | Links the profile to their sign-in; it can't be changed later. |
| <b>Display name *</b> | 2–120 characters.                                                                 | Shown on jobs, the schedule and the dashboard.                 |
| <b>Phone number</b>   | Optional; 7–15 digits.                                                            |                                                                |
| <b>Status</b>         | Available, Busy, Offline, On leave or Inactive.                                   | New profiles start as Offline.                                 |
| Employee number       | Assigned automatically, e.g. TEC-000001.                                          |                                                                |

### Technician statuses

| Status    | Meaning                    | Can be dispatched?                         |
|-----------|----------------------------|--------------------------------------------|
| Available | Free for work.             | Yes                                        |
| Busy      | Currently on a job.        | Yes                                        |
| Offline   | Not working right now.     | Yes                                        |
| On leave  | Away for a period.         | Yes — check before assigning               |
| Inactive  | No longer working for you. | No — hidden from dispatch and the schedule |

- Statuses are set by hand on the technician's profile; dispatching a job doesn't change them.
- Add a profile with **Add technician** → choose the member → **Create technician**. Change it later with **Edit technician**.
- A technician whose profile is Inactive sees an empty dashboard.

## C4 Service types

|                |                                                                             |
|----------------|-----------------------------------------------------------------------------|
| Who can use it | <a href="#">Owner</a> <a href="#">Administrator</a> <a href="#">Manager</a> |
| Where          | <a href="#">/service-types</a> · Operations → Service types                 |
| Use it to      | Define the kinds of work you offer and how long a visit usually takes.      |

### Fields

| Field                                 | What to enter                                                                                            | Good to know                                                                               |
|---------------------------------------|----------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------|
| <b>Name *</b>                         | 2–120 characters, unique in your workspace (including inactive types; capitals and spacing are ignored). | For example AC repair or Solar inspection.                                                 |
| <b>Description</b>                    | Optional, up to 500 characters.                                                                          | What the service covers.                                                                   |
| <b>Estimated duration (minutes) *</b> | 5–1,440.                                                                                                 | Copied onto jobs and shown on schedule visits as “~90 min”. It’s an estimate, not a price. |
| <b>Active service type</b>            | Ticked for new types.                                                                                    | Inactive types can’t be chosen for new requests or jobs; existing ones keep them.          |

- 1 Open **Service types** → **Add service type**.
- 2 Enter the name, description and estimated duration, then select **Create service type**.
- 3 To change or retire one later, open it, choose **Edit service type** and **Save changes**.

# C5 Service requests

|                |                                                                                            |
|----------------|--------------------------------------------------------------------------------------------|
| Who can use it | <span>Owner</span> <span>Administrator</span> <span>Manager</span> <span>Dispatcher</span> |
| Where          | <a href="#">/service-requests</a> · Operations → Service requests                          |
| Use it to      | Capture what a customer asked for before it becomes scheduled work.                        |

## Fields

| Field                 | What to enter                | Good to know                                |
|-----------------------|------------------------------|---------------------------------------------|
| <b>Customer *</b>     | An active customer.          | Search by the beginning of the name.        |
| <b>Service type *</b> | An active service type.      | Shows its estimated duration.               |
| <b>Title *</b>        | 3–160 characters.            | For example “Boiler leaking in plant room”. |
| <b>Description *</b>  | 10–4,000 characters.         | Everything the team needs to know.          |
| <b>Priority</b>       | Low, Normal, High or Urgent. | See below.                                  |

## Priorities

| Priority            | Use it when                              |
|---------------------|------------------------------------------|
| <span>Low</span>    | The work can wait for a convenient slot. |
| <span>Normal</span> | Handle it in the usual order.            |
| <span>High</span>   | Schedule it ahead of normal work.        |
| <span>Urgent</span> | It needs attention as soon as possible.  |

## Statuses and actions

| Status                        | Meaning                                        | What you can do                                               |
|-------------------------------|------------------------------------------------|---------------------------------------------------------------|
| <span>New</span>              | Logged and waiting for review.                 | <b>Start review, Edit request, Create job, Cancel request</b> |
| <span>Reviewing</span>        | Being assessed before scheduling.              | <b>Edit request, Create job, Cancel request</b>               |
| <span>Converted to job</span> | Now tracked as a job.                          | <b>View job</b>                                               |
| <span>Cancelled</span>        | Closed without scheduling; kept for reference. | Nothing — the record is read-only.                            |

## Log a request and turn it into a job

- 1 **Service requests** → **New request**: choose the customer and service type, enter title, description and priority, then **Log request**.
- 2 Open the request and select **Start review** while you assess it (optional).
- 3 Select **Create job**, enter the **Service location** and select **Create job**. The request becomes Converted to job.
- 4 To drop a request instead, choose **Cancel request** and confirm (**Keep request** backs out).

Requests can be edited only while New or Reviewing, and each request becomes at most one job. The list shows the newest first (title order while searching) and can be filtered by status and priority.

## C6 Jobs

|                |                                                                                                        |
|----------------|--------------------------------------------------------------------------------------------------------|
| Who can use it | <a href="#">Owner</a> <a href="#">Administrator</a> <a href="#">Manager</a> <a href="#">Dispatcher</a> |
| Where          | <a href="#">/jobs</a> · Operations → Jobs                                                              |
| Use it to      | Plan, dispatch and track every piece of field work from creation to closure.                           |

## Create a job

- **New job** on the Jobs page: choose the customer and service type, then enter the title, description, priority and **Service location**.
- **Create job** on a service request: details are copied from the request; you only add the service location.

| Field                            | What to enter                                                 | Good to know                                |
|----------------------------------|---------------------------------------------------------------|---------------------------------------------|
| <b>Customer / Service type *</b> | Active records from your workspace.                           | Fixed for jobs created from a request.      |
| <b>Title *</b>                   | 3–160 characters.                                             |                                             |
| <b>Description *</b>             | 10–4,000 characters.                                          |                                             |
| <b>Priority</b>                  | Low, Normal, High or Urgent.                                  |                                             |
| <b>Service location *</b>        | 5–1,000 characters.                                           | The full address the technician will visit. |
| <b>Job number</b>                | Assigned automatically from your Job prefix, e.g. JOB-000001. |                                             |

Job details can be edited with **Edit job** only while the job is New.

## The job page

| Card         | What it's for                                                                                                                                                                                            |
|--------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Work details | Customer, service type and its estimated duration, service location, description and the source request.                                                                                                 |
| Dispatch     | Assign a technician and a visit time.                                                                                                                                                                    |
| Notes        | Internal notes for your team, newest first.                                                                                                                                                              |
| Job status   | The current status and the next statuses you can choose.                                                                                                                                                 |
| Billing      | Quotations and invoices for this job, with shortcuts to create them.                                                                                                                                     |
| Activity     | Audit trail of every change: what changed, when and by whom — including changes made automatically by quotations, invoices and payments, and updates from the technician app with the technician's name. |

## Dispatching

- Choose a **Technician** (active profiles only) and, optionally, a **Visit date and time** in 5-minute steps, in your organization's timezone. Select **Assign technician** — or **Update dispatch** if the job is already assigned.
- A New job becomes Assigned. Leaving the time empty keeps the job in the Schedule's **Unscheduled backlog**.
- Changing the technician or time of an Accepted job sends it back through Rescheduled to Assigned for acceptance.
- Dispatch is available while the job is New, Assigned, Rescheduled or Accepted, and locked from En route onwards.

## The job lifecycle

The main path a job follows. Each box is a status badge you'll see on the job; the colour shows how the status is set.

  Where every new job starts

  Chosen in the Job status card or the technician app

  Automatic from invoices and payments

  Set in the Dispatch card

  Automatic from a linked quotation, or chosen by hand

## Other moves

| From                                                    | Move to                                          | When                                                                                                                          |
|---------------------------------------------------------|--------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------|
| Arrived                                                 | In progress                                      | No diagnosis needed.                                                                                                          |
| Diagnosing                                              | In progress                                      | No quotation needed.                                                                                                          |
| Assigned or Accepted                                    | Rescheduled, then Assigned via the Dispatch card | A new time or technician is needed — chosen by the office, or by a technician declining in the app (which also removes them). |
| Diagnosing or In progress                               | On hold, then back to In progress                | Work is paused (waiting for parts, access...).                                                                                |
| Assigned                                                | Rejected — final                                 | The office closes the job for good. Technicians decline in the app instead, which sends the job back as Rescheduled.          |
| Any status up to Approved, plus On hold and Rescheduled | Cancelled — final                                | The job won't go ahead. In progress jobs must go On hold first.                                                               |

## All job statuses

| Status            | Meaning                                                                     | Can move to                                   |
|-------------------|-----------------------------------------------------------------------------|-----------------------------------------------|
| New               | Created; not yet dispatched.                                                | Assigned (Dispatch card), Cancelled           |
| Assigned          | A technician is assigned.                                                   | Accepted, Rejected, Rescheduled, Cancelled    |
| Accepted          | The technician accepted the visit.                                          | En route, Rescheduled, Cancelled              |
| Rescheduled       | A new time or technician is needed, for example after a decline in the app. | Assigned (Dispatch card), Cancelled           |
| Rejected          | Closed by the office without the work.                                      | Final                                         |
| En route          | Travelling to the site.                                                     | Arrived, Cancelled                            |
| Arrived           | On site.                                                                    | Diagnosing, In progress, Cancelled            |
| Diagnosing        | Assessing the work before starting.                                         | Quote needed, In progress, On hold, Cancelled |
| Quote needed      | A quotation must be prepared and approved.                                  | Awaiting approval, Cancelled                  |
| Awaiting approval | Quotation sent; waiting for the customer.                                   | Approved, Cancelled                           |
| Approved          | The customer approved the quotation.                                        | In progress, Cancelled                        |
| In progress       | Work has started.                                                           | On hold, Completed                            |
| On hold           | Paused.                                                                     | In progress, Cancelled                        |
| Completed         | Work finished; ready to invoice.                                            | Invoiced (by issuing an invoice)              |
| Invoiced          | An invoice has been issued.                                                 | Partially paid, Paid (by payments)            |
| Partially paid    | Part of the invoice is paid.                                                | Paid (by payments)                            |
| Paid              | Fully paid.                                                                 | Closed                                        |
| Closed            | Paid and closed; no further changes.                                        | Final                                         |
| Cancelled         | The job won't go ahead; kept for reference.                                 | Final                                         |

Accepted, En route, Arrived and In progress need an assigned technician. Cancelled and Rejected ask you to confirm because they can't be undone.

## Notes, billing and finding jobs

- **Notes** — type in the note box and select **Add note**. Notes are internal, up to 2,000 characters, and can't be edited or deleted.
- **Billing card** — lists the job's quotations and invoices with status and amounts. **New quotation** appears for Owners, Administrators and Managers while the job is Diagnosing, Quote needed, Awaiting approval, Approved, On hold or In progress. **New invoice** appears for Owners and Administrators once the job is Completed, Invoiced or Partially paid.
- **Finding jobs** — search by the beginning of the **Job title** and filter by **Status** and **Priority**; newest first.

## C7 Schedule

|                |                                                                                                        |
|----------------|--------------------------------------------------------------------------------------------------------|
| Who can use it | <a href="#">Owner</a> <a href="#">Administrator</a> <a href="#">Manager</a> <a href="#">Dispatcher</a> |
| Where          | <a href="#">/schedule</a> · Operations → Schedule                                                      |
| Use it to      | See who is going where and when, and find jobs that still need a visit time.                           |

| Part of the page               | What it does                                                                                                                                                |
|--------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Day / Week</b>              | Switch between one day and a seven-day view. The week starts on the day chosen in Settings.                                                                 |
| <b>Previous · Today · Next</b> | Move through days or weeks.                                                                                                                                 |
| <b>Technician</b>              | Show <b>All technicians</b> or one technician.                                                                                                              |
| Day view lanes                 | One lane per technician who is Available, Busy, Offline or On leave, plus <b>Unassigned visits</b> for visits whose technician profile is no longer active. |
| Visit card                     | Time, status, priority, title, job number, customer and estimated duration. Select it to open the job.                                                      |
| Page header                    | Your organization's timezone and working hours (from Settings).                                                                                             |
| <b>Unscheduled backlog</b>     | Open jobs (New, Assigned or Rescheduled) with no visit time, newest first. Open one and give it a time in the Dispatch card.                                |

- To move a visit, open the job and change its time or technician in the **Dispatch** card.
- Times are always shown in the organization's timezone, whatever the viewer's computer is set to.

## C8 Quotations

|                |                                                                                                         |
|----------------|---------------------------------------------------------------------------------------------------------|
| Who can use it | <a href="#">Owner</a> <a href="#">Administrator</a> <a href="#">Manager</a> <a href="#">Accountant</a>  |
| Where          | <a href="#">/quotations</a> · Sales & billing → Quotations                                              |
| Use it to      | Price work before it starts, record the customer's decision and turn approved quotations into invoices. |

### Create a quotation

- **New quotation** on the Quotations page — for any active customer.
- **New quotation** on a job's Billing card — the customer and job are filled in and fixed.

| Field              | What to enter                            | Good to know                                                |
|--------------------|------------------------------------------|-------------------------------------------------------------|
| <b>Customer *</b>  | An active customer, or fixed by the job. |                                                             |
| <b>Title *</b>     | 2–120 characters.                        | Shown in lists and on the document.                         |
| <b>Valid until</b> | A date, or leave it empty.               | Empty means today plus the Quote validity days in Settings. |
| <b>Notes</b>       | Up to 1,000 characters.                  | Terms, scope or payment details.                            |

| Field        | What to enter                                                                                                                                                                        | Good to know                                                                                     |
|--------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------|
| Line items * | 1–100 lines, each with a <b>Description</b> (up to 300 characters), <b>Qty</b> (more than 0, up to 3 decimals), <b>Unit price</b> (2 decimals, before tax) and <b>Tax %</b> (0–100). | New lines start with the workspace default tax rate. Subtotal, Tax and Total update as you type. |

**Add from catalog** searches active products and adds a line with the product's name, price and tax rate (or the workspace default if the product uses it). **Add custom line** adds a blank line. Quotations take the workspace currency when they are created and are numbered from your Quote prefix, e.g. QUO-000001.

## Statuses and actions

| Status                      | Meaning                                    | Actions                                              |
|-----------------------------|--------------------------------------------|------------------------------------------------------|
| <b>Draft</b>                | Being prepared; the lines can be edited.   | <b>Edit quotation, Mark as sent</b>                  |
| <b>Sent</b>                 | With the customer; the lines are locked.   | <b>Approve, Reject</b>                               |
| <b>Sent · past validity</b> | Sent, and the Valid until date has passed. | <b>Approve, Reject, Mark expired</b>                 |
| <b>Approved</b>             | The customer accepted.                     | <b>Convert to invoice</b> (once; invoice roles only) |
| <b>Rejected</b>             | The customer declined.                     | —                                                    |
| <b>Expired</b>              | Closed without a decision.                 | —                                                    |

## Effect on a linked job

| When you...                   | A job that is...           | ...moves to                                             |
|-------------------------------|----------------------------|---------------------------------------------------------|
| <b>Mark as sent</b>           | Diagnosing or Quote needed | Awaiting approval                                       |
| <b>Approve</b>                | Awaiting approval          | Approved                                                |
| <b>Reject or Mark expired</b> | —                          | No change; the dispatcher decides what happens next.    |
| <b>Convert to invoice</b>     | —                          | No change; the invoice moves the job when it is issued. |

- A job can have only one Sent or Approved quotation at a time. Reject or expire the current one before sending another.
- Converting creates one draft invoice with the same customer, job and lines. It needs an Owner, Administrator or Accountant.

# C9 Invoices

|                |                                                                             |
|----------------|-----------------------------------------------------------------------------|
| Who can use it | <span>Owner</span> <span>Administrator</span> <span>Accountant</span>       |
| Where          | <a href="#">/invoices</a> · Sales & billing → Invoices                      |
| Use it to      | Bill customers, issue invoices with due dates and track what is still owed. |

## Three ways to create an invoice

- **New invoice** on the Invoices page — for any active customer (not linked to a job).
- **Convert to invoice** on an approved quotation — copies its customer, job and lines.
- **New invoice** on a job's Billing card — Owners and Administrators, once the job is Completed, Invoiced or Partially paid.

Fields and line items work exactly as on quotations (C8), except **Due date**: leave it empty to have it set when the invoice is issued (issue date plus the Invoice due days in Settings). Invoices are numbered from your Invoice prefix, e.g. INV-000001.

## Statuses and actions

| Status                        | Meaning                                 | Actions                                                  |
|-------------------------------|-----------------------------------------|----------------------------------------------------------|
| <span>Draft</span>            | Being prepared; can be edited.          | <b>Edit invoice, Issue invoice, Void</b>                 |
| <span>Issued</span>           | Sent to the customer; lines locked.     | Record payment; <b>Void</b> while no payment is recorded |
| <span>Issued · overdue</span> | The due date has passed with a balance. | Record payment                                           |
| <span>Partially paid</span>   | Some money has been received.           | Record payment                                           |
| <span>Paid</span>             | The balance is zero.                    | —                                                        |
| <span>Void</span>             | Cancelled; nothing is owed.             | —                                                        |

## What happens when you issue

- The lines lock and the **Due date** is set if it was empty.
- Products that track stock are deducted in whole units. If there isn't enough stock, issuing is refused and nothing changes.
- A linked job must be Completed (or already invoiced); it moves to Invoiced.

## Voiding

- Drafts, and issued invoices with no payments, can be voided. Stock deducted at issue is returned, the balance becomes zero, and a linked job keeps its status.

## The invoice page

Shows the line items with Subtotal, Tax, Total, **Paid** and **Balance due**; the **Payments** card with the payment form and history; the status card with dates; and links to the source quotation and job.

# C10 Payments

|                |                                                                                              |
|----------------|----------------------------------------------------------------------------------------------|
| Who can use it | <a href="#">Owner</a> <a href="#">Administrator</a> <a href="#">Accountant</a>               |
| Where          | <a href="#">/payments</a> · Sales & billing → Payments (record payments on the invoice page) |
| Use it to      | Record money received against invoices and see every payment in one ledger.                  |

## Record a payment

- 1 Open an invoice that is Issued or Partially paid.
- 2 In the **Payments** card, fill in the fields below and select **Record payment**.

| Field              | What to enter                                      | Good to know                     |
|--------------------|----------------------------------------------------|----------------------------------|
| <b>Amount *</b>    | More than 0 and up to the balance due, 2 decimals. | Starts with the full balance.    |
| <b>Method</b>      | Cash, Card, Bank transfer, UPI, Cheque or Other.   | Starts with Bank transfer.       |
| <b>Received on</b> | Date and time, in your organization's timezone.    | Starts with now.                 |
| <b>Reference</b>   | Optional, up to 120 characters.                    | Transaction ID, cheque number... |
| <b>Notes</b>       | Optional, up to 500 characters.                    |                                  |

## What a payment changes

| Record     | Before         | After                                                  |
|------------|----------------|--------------------------------------------------------|
| Invoice    | Issued         | Partially paid — or Paid when the balance reaches zero |
| Invoice    | Partially paid | Paid when the balance reaches zero                     |
| Linked job | Invoiced       | Partially paid — or Paid                               |
| Linked job | Partially paid | Paid                                                   |

## The payment ledger

- Lists payments newest first by when they were received, 50 per page, with a total for the page.
- Filter by **Method**; each row links to its invoice.
- Payments are final: they can't be edited or deleted, so record the exact amount received. Saving the same payment twice by accident records it once.

# C11 Products

|                |                                                                                                  |
|----------------|--------------------------------------------------------------------------------------------------|
| Who can use it | <span>Owner</span> <span>Administrator</span> <span>Manager</span>                               |
| Where          | <a href="#">/inventory/products</a> · Inventory → Products                                       |
| Use it to      | Keep a catalog of the parts, materials and services you sell, with prices, tax and stock levels. |

## Fields

| Field                 | What to enter                                                             | Good to know                                                                   |
|-----------------------|---------------------------------------------------------------------------|--------------------------------------------------------------------------------|
| <b>Name *</b>         | 2–120 characters.                                                         | Search finds products by the beginning of the name.                            |
| <b>SKU *</b>          | 2–40 characters: letters, numbers, dots, hyphens, underscores or slashes. | Unique in your workspace and saved in capitals: pipe-cu-15 becomes PIPE-CU-15. |
| <b>Description</b>    | Optional, up to 500 characters.                                           |                                                                                |
| <b>Unit *</b>         | Up to 16 characters, e.g. pc, hr, m, kg.                                  |                                                                                |
| <b>Unit price *</b>   | 0 or more, 2 decimals, before tax.                                        | Document lines can override it.                                                |
| <b>Tax rate (%)</b>   | 0–100, or tick <b>Use workspace default</b> .                             | The default follows Settings.                                                  |
| <b>Track stock</b>    | Ticked for physical items.                                                | Untick for services and labour.                                                |
| <b>Reorder level</b>  | A whole number.                                                           | The product shows Low stock at or below it.                                    |
| <b>Active product</b> | Ticked for new products.                                                  | Inactive products stay on existing documents but can't be picked for new ones. |

## Stock badges

| Badge                     | Meaning                                 |
|---------------------------|-----------------------------------------|
| <span>In stock</span>     | Tracked, and above the reorder level.   |
| <span>Low stock</span>    | Tracked, at or below the reorder level. |
| <span>Out of stock</span> | Tracked, with nothing on hand.          |
| <span>Not tracked</span>  | Stock isn't tracked for this product.   |

- The product page shows its details, a **Record a stock movement** form, the last 10 movements and a **Stock** card with quantity on hand, reorder level and stock value (on hand × unit price). **Stock history** opens the ledger for the product.
- Filter the list by **Status** and by **Stock** (Any, Tracked, Low or out of stock).
- Quantity on hand only changes through stock movements and invoices — never by editing the product.

# C12 Stock

|                |                                                                                             |
|----------------|---------------------------------------------------------------------------------------------|
| Who can use it | <a href="#">Owner</a> <a href="#">Administrator</a> <a href="#">Manager</a>                 |
| Where          | <a href="#">/inventory/stock</a> · Inventory → Stock                                        |
| Use it to      | Record stock coming in and going out, correct counts, and see every movement in one ledger. |

## Record a movement

| Field                | What to enter                                                                                                                      |
|----------------------|------------------------------------------------------------------------------------------------------------------------------------|
| <b>Product *</b>     | An active product that tracks stock.                                                                                               |
| <b>Movement type</b> | <b>Stock in</b> — received or returned. <b>Stock out</b> — used, sold or written off. <b>Count</b> — set the quantity you counted. |
| <b>Quantity *</b>    | Whole units. For a Count, the counted quantity (it can be 0).                                                                      |
| <b>Reference</b>     | Optional, up to 120 characters: PO number, delivery note, job...                                                                   |
| <b>Reason</b>        | Optional, up to 300 characters.                                                                                                    |

## Reading the ledger

| Column         | Shows                                                                                                         |
|----------------|---------------------------------------------------------------------------------------------------------------|
| When           | Date and time of the movement.                                                                                |
| Product        | Name and SKU; opens the product.                                                                              |
| Movement       | Stock in, Stock out or Count adjustment, and its source: Recorded manually, Invoice issued or Invoice voided. |
| Change / After | The change in quantity (e.g. +25, -4) and the quantity on hand afterwards.                                    |
| Reference      | The reference and reason, and who recorded it. Invoice movements link to the invoice.                         |

- The **Low stock** panel lists active products at or below their reorder level.
- Stock can't go below zero: a Stock out larger than the quantity on hand is refused.
- Movements can't be edited or deleted. Fix a mistake with a new movement or a **Count**.
- Issuing an invoice deducts tracked products automatically; voiding it returns them.

## C13 Organization settings

|                |                                                                                                      |
|----------------|------------------------------------------------------------------------------------------------------|
| Who can use it | <b>Owner</b>                                                                                         |
| Where          | <a href="/settings/organization">/settings/organization</a> · Administration → Organization          |
| Use it to      | Set your organization's name, timezone and the prefixes used for job, invoice and quotation numbers. |

| Field                                             | What to enter                                                                | Good to know                                                                                                  |
|---------------------------------------------------|------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------|
| <b>Organization name *</b>                        | 2–120 characters.                                                            | Shown across ServiceFlow.                                                                                     |
| <b>Workspace slug</b>                             | Read-only.                                                                   | Identifies your workspace.                                                                                    |
| <b>Timezone *</b>                                 | For example Asia/Kolkata.                                                    | Used for the dashboard's day, the schedule, visit times, quote validity, invoice due dates and payment times. |
| <b>Job prefix, Invoice prefix, Quote prefix *</b> | 2–8 characters: letters, numbers, hyphens or underscores; saved in capitals. | Applies to numbers issued after the change; the running sequence continues.                                   |

Select **Save changes**; "Changes saved" confirms it.

## C14 Team

|                |                                                                     |
|----------------|---------------------------------------------------------------------|
| Who can use it | <b>Owner</b> <b>Administrator</b>                                   |
| Where          | <a href="/settings/team">/settings/team</a> · Administration → Team |
| Use it to      | Invite colleagues, set their roles and control who can sign in.     |

- **Members** lists everyone with their email, role and status. Change a role with the role list on the row; **Suspend** and **Reactivate** control access. Rows marked **Workspace owner** or **This is you** can't be changed.
- **Invite a team member** — enter an email, choose Administrator, Manager, Dispatcher, Technician or Accountant, and select **Create invitation link**. The link is shown once: copy it and send it yourself.
- **Pending invitations** expire after 7 days. **Regenerate link** issues a fresh link (the old one stops working); **Revoke** cancels the invitation.

| Situation                                       | What happens                                                 |
|-------------------------------------------------|--------------------------------------------------------------|
| Inviting someone who is already a member        | Refused — they already have access.                          |
| Inviting an email that has a pending invitation | Refused — regenerate the existing invitation's link instead. |
| Inviting someone whose membership is suspended  | Refused — reactivate them instead.                           |
| Changing the Owner, or your own role or access  | Not possible from the Team page.                             |
| Suspending a member                             | Access ends at once; records they created keep their name.   |

## C15 Settings (workspace defaults)

|                |                                                                           |
|----------------|---------------------------------------------------------------------------|
| Who can use it | <a href="#">Owner</a>                                                     |
| Where          | <a href="#">/settings</a> · Administration → Settings                     |
| Use it to      | Set the defaults used by quotations, invoices, payments and the schedule. |

| Field                        | What to enter                                            | Where it's used                                                                            |
|------------------------------|----------------------------------------------------------|--------------------------------------------------------------------------------------------|
| <b>Currency</b>              | USD, EUR, GBP, INR, AED, AUD, CAD, SGD, ZAR, JPY or BRL. | New quotations and invoices (and their payments). Existing documents keep their currency.  |
| <b>Default tax rate (%)</b>  | 0–100, up to 2 decimals.                                 | The starting tax rate for new lines, and for products set to use the workspace default.    |
| <b>Quote validity (days)</b> | 1–365.                                                   | The Valid until date when a quotation leaves it empty.                                     |
| <b>Invoice due (days)</b>    | 0–365.                                                   | Due date = issue date + this many days, unless the invoice sets one. 0 means due on issue. |
| <b>Opens / Closes</b>        | 24-hour times; closing must be after opening.            | Shown as working hours on the Schedule.                                                    |
| <b>Week starts on</b>        | Monday or Sunday.                                        | The first day of the Schedule's week view.                                                 |

Select **Save changes**; "Changes saved" confirms it. Changes apply to documents created afterwards.

## PART D

# Workflows & help

See how the modules fit together, look up any status or term, fix common problems, and check what this release doesn't do yet.

| Section | What you'll find                            |
|---------|---------------------------------------------|
| D1      | From call to closed job: a complete example |
| D2      | Status glossary                             |
| D3      | Key terms                                   |
| D4      | Troubleshooting                             |
| D5      | Owner setup checklist and known limitations |

**Where to start**

Training someone new? Walk through D1 together in your own workspace — it touches every role and almost every module.

# D1 From call to closed job

Acme Hotels calls about a leaking boiler. This is how the work moves through ServiceFlow, and who does what.

|    | Who                   | Where                                 | What they do                                                                                                            | Result                                                         |
|----|-----------------------|---------------------------------------|-------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------|
| 1  | Dispatcher            | Service requests → <b>New request</b> | Logs the call: Acme Hotels, service type Boiler service, priority High → <b>Log request</b> .                           | Request: New                                                   |
| 2  | Dispatcher            | Request page                          | <b>Start review</b> , then <b>Create job</b> and adds the service location.                                             | Request: Converted to job · Job JOB-000007: New                |
| 3  | Dispatcher            | Job → <b>Dispatch</b>                 | Chooses technician Tess and tomorrow 10:30 → <b>Assign technician</b> .                                                 | Job: Assigned · visit on the Schedule                          |
| 4  | Technician            | Technician app → the job              | Tess taps <b>Accept job</b> , <b>On my way</b> , <b>I've arrived</b> and <b>Start diagnosis</b> as the visit goes (E5). | Each step in Activity, with Tess's name                        |
| 5  | Manager               | Job → Billing → <b>New quotation</b>  | Adds a part from the catalog and 2 hours of labour → <b>Create quotation</b> → <b>Mark as sent</b> .                    | Quotation: Sent · Job: Awaiting approval                       |
| 6  | Manager or Accountant | Quotation page                        | The customer agrees → <b>Approve</b> .                                                                                  | Quotation: Approved · Job: Approved                            |
| 7  | Technician            | Technician app → the job              | <b>Start work</b> , then <b>Complete job</b> with a note when the work is done.                                         | Job: Completed                                                 |
| 8  | Accountant            | Quotation → <b>Convert to invoice</b> | Checks the draft → <b>Issue invoice</b> .                                                                               | Invoice: Issued, due date set · stock deducted · Job: Invoiced |
| 9  | Accountant            | Invoice → <b>Payments</b>             | Records ₹5,000 by UPI, later the balance by bank transfer.                                                              | Invoice and job: Partially paid, then Paid                     |
| 10 | Dispatcher            | Job → <b>Job status</b>               | Chooses Closed.                                                                                                         | Job: Closed                                                    |

## Shortcuts

No quotation needed? Go straight from Arrived or Diagnosing to **In progress**, and after **Completed** an Owner or Administrator can raise the invoice from the job's Billing card.

The job's **Activity** card shows the whole story, including the status changes made automatically by the quotation, the invoice and the payments.

## D2 Status glossary

Job statuses are listed in full in C6. The other statuses are below.

### Service requests

| Status           | Meaning                                        |
|------------------|------------------------------------------------|
| New              | Logged and waiting for review.                 |
| Reviewing        | Being assessed before scheduling.              |
| Converted to job | Now tracked as a job.                          |
| Cancelled        | Closed without scheduling; kept for reference. |

### Quotations

| Status               | Meaning                                    |
|----------------------|--------------------------------------------|
| Draft                | Being prepared.                            |
| Sent                 | With the customer; lines locked.           |
| Sent · past validity | Sent, and the Valid until date has passed. |
| Approved             | Accepted by the customer.                  |
| Rejected             | Declined by the customer.                  |
| Expired              | Closed without a decision.                 |

### Invoices

| Status           | Meaning                                 |
|------------------|-----------------------------------------|
| Draft            | Being prepared.                         |
| Issued           | Sent; payment expected by the due date. |
| Partially paid   | Some money received.                    |
| Paid             | Nothing left to pay.                    |
| Void             | Cancelled.                              |
| Issued · overdue | Past the due date with a balance.       |

## Stock movements and team

| Status             | Meaning                                                       |
|--------------------|---------------------------------------------------------------|
| Stock in           | Units received or returned.                                   |
| Stock out          | Units used, sold or written off.                              |
| Count adjustment   | Quantity set from a count; the ledger records the difference. |
| Active member      | Can sign in with their role.                                  |
| Suspended member   | Can't sign in until reactivated.                              |
| Pending invitation | Link created, not yet accepted; expires after 7 days.         |

## D3 Key terms

| Term                     | Meaning                                                                                                     |
|--------------------------|-------------------------------------------------------------------------------------------------------------|
| Workspace / organization | Your business in ServiceFlow. Every record belongs to it.                                                   |
| Member                   | A person who can sign in to your workspace, with one role.                                                  |
| Role                     | Owner, Administrator, Manager, Dispatcher, Technician or Accountant — decides what a member can see and do. |
| Technician profile       | The record that lets a Technician member be dispatched and scheduled.                                       |
| Technician app           | ServiceFlow's phone app for Technician members (Part E).                                                    |
| Firebase Authentication  | The Google service that checks email addresses and passwords for ServiceFlow, on the web and in the app.    |
| Service type             | A kind of work you offer, with an estimated duration.                                                       |
| Service request          | What a customer asked for, captured before it becomes work.                                                 |
| Job                      | A piece of field work with a service location, technician, visit time and status.                           |
| Dispatch                 | Assigning a technician and a visit time to a job.                                                           |
| Visit time               | When the technician is expected on site, in your organization's timezone.                                   |
| Unscheduled backlog      | Open jobs that don't have a visit time yet.                                                                 |
| Quotation                | A priced offer the customer approves before work starts.                                                    |
| Invoice                  | A bill for work done. Issuing it sets the due date and deducts tracked stock.                               |
| Balance due              | Invoice total minus payments received.                                                                      |
| Payment                  | Money received against an invoice. Payments are final.                                                      |
| Product · SKU            | A catalog item, and its unique code.                                                                        |
| Stock movement           | Any change to a product's quantity on hand.                                                                 |
| Reorder level            | The quantity at or below which a product counts as low stock.                                               |
| Prefix                   | The letters in front of job, invoice and quotation numbers, e.g. JOB in JOB-000001.                         |

## D4 Troubleshooting

| What you see                                                          | Why                                                       | What to do                                                              |
|-----------------------------------------------------------------------|-----------------------------------------------------------|-------------------------------------------------------------------------|
| "...has changed since you opened the form."                           | Someone else saved the record first.                      | Open the latest version (link in the message) and re-apply your change. |
| "Your session has expired... Your entries are still here."            | Your sign-in ended.                                       | Sign in again in a new tab, come back and save.                         |
| "You don't have permission to..." or a "not found" page               | Your role doesn't include that module.                    | See B2, or ask an Administrator.                                        |
| A technician is missing from the dispatch list                        | Their profile is Inactive or doesn't exist yet.           | A Manager reactivates or creates the profile (C3).                      |
| No members to choose under <b>Add technician</b>                      | Nobody with the Technician role is waiting for a profile. | Invite the person as Technician and wait for them to accept (C14).      |
| "This job already has a sent or approved quotation..."                | Only one active quotation per job.                        | Reject or expire the current one first.                                 |
| "The linked job must be completed before this invoice can be issued." | The job isn't Completed yet.                              | Ask the technician or dispatcher to complete the job, then issue.       |
| "...does not have enough stock on hand for this quantity."            | Tracked stock is lower than the invoice quantity.         | Record a Stock in or correct the Count, then issue again.               |
| "...tracks whole units. Use a whole-number quantity."                 | A tracked product has a fractional quantity.              | Use whole numbers, or untick Track stock for that product.              |
| "The amount is more than the balance due..."                          | The payment exceeds what is owed.                         | Enter up to the balance due.                                            |
| "This invoice has payments recorded and cannot be voided."            | Payments are final.                                       | Settle any difference with the customer outside ServiceFlow.            |
| "This SKU is already used..." / "This name is already used..."        | Duplicates aren't allowed, even with inactive records.    | Choose another value or edit the existing record.                       |
| "This link isn't valid anymore." (invitation)                         | The link expired, was used or was revoked.                | Ask for a new link.                                                     |
| "This invitation was sent to a different email address..."            | You're signed in with another email.                      | Sign in with the invited email.                                         |
| "An invitation for this email is still pending..."                    | A link already exists for that email.                     | Regenerate the existing invitation's link.                              |
| A message in the technician app                                       | Something on the account or a job needs attention.        | Look it up in E7.                                                       |

## D5 Owner setup checklist and known limitations

### Setup checklist

| Task                                                                                                       | Where                     |

| <input type="checkbox"/> Add your regular customers                                                        | Customers · C2            |
| <input type="checkbox"/> Run one job from request to payment with the team                                 | All · D1                  |

### Known limitations in this release

- ServiceFlow doesn't send email yet: share invitation links, quotations and invoices yourself.
- There is no printable or PDF layout for quotations and invoices yet.
- In the technician app, changing a job needs a connection, and there are no photos, customer signatures or push notifications yet.
- The web admin is in English only. The technician app is in English, Hindi and Telugu (E8).
- Payments can't be edited, reversed or refunded, and there are no credit notes.
- Voiding an issued invoice doesn't change the linked job's status.
- Stock is counted in whole units at a single location.
- Quotations and invoices started from their own list pages aren't linked to a job; raise them from the job page to link them.
- Search matches the beginning of names and titles only.
- Ownership of a workspace can't be transferred in the app.

## PART E

# Technician app

ServiceFlow's app for technicians' phones. Each technician signs in with their ServiceFlow account, sees the jobs assigned to them and updates each one from the site — accepting it, setting off, arriving, starting, pausing and completing it — with notes the office sees straight away. It works in English, Hindi or Telugu, light or dark, and opens even without signal.

| Section | What you'll find                                                |
|---------|-----------------------------------------------------------------|
| E1      | Set up the app (whoever runs ServiceFlow, once)                 |
| E2      | The app at a glance: who can use it and what it shows           |
| E3      | Get access and sign in                                          |
| E4      | Your jobs: what's on today, what's next and what's done         |
| E5      | Work a job: status steps, declining, notes, Call and Directions |
| E6      | Verify your email and reset your password                       |
| E7      | When the app says you can't continue                            |
| E8      | Language and theme: English, Hindi or Telugu, light or dark     |
| E9      | What's coming next                                              |

## Where to start

Setting ServiceFlow up for your business? Start with E1, then give technicians access with E3. Technician? Start at E3, then E4 and E5.

# E1 Set up the app

The technician app uses the same Firebase project as the web admin, and only one Firebase service: **Authentication**, which checks email addresses and passwords. The app never reads or writes your database or file storage directly. Everything else — the account check and every job — comes from the ServiceFlow server, which checks each request, so the security rules that keep your records private stay closed to phones.

## How a technician signs in

## Before you start

| Check                                                                                                                                                               | Where                                                                                 |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------|
| <input type="checkbox"/> <b>Email/Password</b> sign-in is enabled. The web admin already relies on it.                                                              | Firebase console → Authentication → Sign-in method                                    |
| <input type="checkbox"/> The web admin runs at an address the phones can reach, and is up to date. The app's account checks and job screens live there.             | Your server, or your computer while testing                                           |
| <input type="checkbox"/> Firestore indexes are deployed, including the one for each technician's Done list: <code>firebase deploy --only firestore:indexes</code> . | The project folder, once per update                                                   |
| <input type="checkbox"/> You have the web admin's public Firebase settings (the <code>NEXT_PUBLIC_FIREBASE_*</code> values).                                        | <code>apps/web/.env.local</code> , or Firebase console → Project settings → Your apps |

## Set up the app

- 1 In the project's `apps/mobile` folder, copy `.env.example` to `.env.local`.
- 2 Fill in the six `EXPO_PUBLIC_FIREBASE_*` settings with the same values as the web admin's `NEXT_PUBLIC_FIREBASE_*` settings.
- 3 Set `EXPO_PUBLIC_API_URL` to the web admin's address (see the table below).
- 4 Run `npm install` once in the project folder, start the web admin with `npm run web`, then start the app with `npm run mobile`.
- 5 Open the app on a test phone — scan the QR code with the **Expo Go** app, or use a development build — and sign in with a technician account (E3). **My jobs** should show the technician's name and the jobs assigned to them.

## App settings

| Setting                                             | What to enter                                                                                                                                                                                                                                                                           |
|-----------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <code>EXPO_PUBLIC_FIREBASE_*</code> (six settings)  | The same values as <code>NEXT_PUBLIC_FIREBASE_*</code> in the web admin: API key, auth domain, project ID, storage bucket, messaging sender ID and app ID.                                                                                                                              |
| <code>EXPO_PUBLIC_API_URL</code>                    | The web admin's address. iPhone simulator: <code>http://localhost:3000</code> · Android emulator: <code>http://10.0.2.2:3000</code> · phone on your Wi-Fi: <code>http://</code> + your computer's Wi-Fi IP address + <code>:3000</code> · live use: your <code>https://</code> address. |
| <code>EXPO_PUBLIC_USE_FIREBASE_EMULATOR</code>      | <code>true</code> only while testing with the local Firebase emulators; <code>false</code> for real accounts.                                                                                                                                                                           |
| <code>EXPO_PUBLIC_FIREBASE_AUTH_EMULATOR_URL</code> | Where the Auth emulator runs while testing, for example <code>http://127.0.0.1:9099</code> .                                                                                                                                                                                            |

### Keep secrets on the server

Every setting that starts with `EXPO_PUBLIC_` is built into the app, and anyone who has the app can read it. Never put the service-account file, `GOOGLE_APPLICATION_CREDENTIALS` or any password there — the server keeps those.

For live use, the server address must start with `https://`.

### Note

Password-reset and verification emails are sent by Firebase. Change their sender name and wording in the Firebase console under **Authentication** → **Templates**.

Publishing to the App Store and Google Play is a later step: it needs ServiceFlow app icons, store listings and the live `https://` address. Until then, run pilots with Expo Go or a development build.

## E2 The app at a glance

The app gives each technician the jobs assigned to them and lets them update each one from the site. The office sees every change on the job page straight away.

**Sign in**

Same email and password as the web.

**My jobs**

The job in hand, today, and what's next.

**A job**

Visit, customer, address, and the next step.

### What technicians can do

- Sign in with their ServiceFlow email and password. The app keeps them signed in until they choose **Sign out**, and opens even without signal (E3).
- See their jobs: the one in hand, today's visits, what's coming up, jobs without a time, jobs waiting on the office, and jobs done in the last 7 days (E4).
- Update a job as they work — from **Accept job** to **Complete job** — decline one they can't do, or put one on hold, with a reason the office sees (E5).
- Call the customer, open directions to the address, and add notes for the office (E5).
- Verify their email address and reset a forgotten password (E6), and read a clear explanation, with **Try again**, when something needs attention (E7).
- Use the app in English, Hindi or Telugu, with a System, Light or Dark theme (E8).

### Who can use it

Members with the **Technician** role whose technician profile is linked to their account and isn't Inactive. Owners, Administrators, Managers, Dispatchers and Accountants who sign in are told the app is for technicians and keep using the web admin.

Under the greeting, My jobs shows the technician's availability, set by the office team in Technicians (C3):

Available Busy Offline On leave

## E3 Get access and sign in

A technician can use the app once four things are in place. The first three happen in the web admin.

|   | Who                             | What happens                                                                                               | Where                |
|---|---------------------------------|------------------------------------------------------------------------------------------------------------|----------------------|
| 1 | Owner or Administrator          | Invites the person with the <b>Technician</b> role and shares the link.                                    | Team · C14           |
| 2 | Technician                      | Opens the invitation on the web, creates an account or signs in, and verifies their email.                 | Invitation link · A4 |
| 3 | Manager, Administrator or Owner | Creates the technician profile: <b>Technicians</b> → <b>Add technician</b> , then chooses the team member. | Technicians · C3     |
| 4 | Technician                      | Signs in to the app on their phone with the same email and password.                                       | Technician app       |

### Sign in

- 1 Open the ServiceFlow app. The first time, choose your language and theme and tap **Continue** (E8). If you've signed in on this phone before, it opens straight on **My jobs**.
- 2 Enter your **Email** and **Password**. Tap the eye icon to show the password while you type.
- 3 Tap **Sign in**. The app checks your account with ServiceFlow and opens **My jobs**.

### Good to know

- The app opens straight on My jobs — even without signal — using its last check with ServiceFlow, then checks again in the background: when it opens, when you come back to it, every 15 minutes, and more often while offline. Pull down on My jobs to check now.
- Without signal, a banner says **You're offline. Showing your details from 9:15**. Nothing is lost: tap **Try again** once you're connected. After 7 days without a successful check, the app needs a connection before it opens.
- If your membership is suspended, the app shows **Your account isn't active**. If your account is disabled or your sign-in is revoked, it signs you out with **Your session has ended. Please sign in again**.
- A new password set with **Forgot password?** works in the app and on the web.

#### Tip

On a shared or borrowed phone, sign out when you finish: tap the language button at the top of My jobs to open **Settings**, then **Sign out**. Signing out also removes the jobs saved on the phone.

## E4 Your jobs

**My jobs** is the first screen after sign-in. It lists every job assigned to you, in the order you'll need them, with visit times in your workspace's time zone.

**My jobs**  
Pull down to refresh.

**Done**  
Completed in the last 7 days.

**Without signal**  
The saved list, with the time it's from.

| Group                          | What's in it                                                                                                                             |
|--------------------------------|------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Now</b>                     | The job you're working on: En route, Arrived, Diagnosing, In progress, or Approved and ready to continue. It has a green border.         |
| <b>Today</b>                   | Today's visits by time. A visit from an earlier day that hasn't started stays at the top, marked <b>Was due ...</b> in red.              |
| <b>Coming up</b>               | Later visits, by day: <b>Tomorrow</b> , then dates such as <b>Wed 7 Oct</b> .                                                            |
| <b>No visit time yet</b>       | Jobs assigned to you without a time. Your office will set one.                                                                           |
| <b>Waiting</b>                 | Jobs waiting on the office or the customer: Quote needed, Awaiting approval, On hold, or Rescheduled while the office changes the visit. |
| <b>Done in the last 7 days</b> | A link at the bottom to the jobs you completed this week.                                                                                |

Each job shows its visit time, title, customer, the first line of the address and its status. High and Urgent jobs carry a marker:

## Good to know

- The list refreshes each time the app checks your account (E3), and when you pull down.
- Without signal, the app shows the jobs from its last update, with a banner saying when that was. Jobs you've opened keep their details, notes and history.
- A job leaves your list when it's completed (it moves to Done), when you decline it, or when the office reassigns or cancels it.

## E5 Work a job

Tap a job to open it. The next step is the green button at the bottom; other choices are under **More options**. The app shows only the steps the job allows right now.

**The job**  
Call, Directions, notes and the next step.

**One tap, then Undo**  
Sent after 4 seconds.

**Decline**  
A reason is needed.

## A typical visit

- 1 **Accept job** when you've seen it. Can't do it? Tap **More options** → **Decline** instead (below).
- 2 **On my way** when you set off. **Directions** opens your maps app with the address; **Call** rings the customer.
- 3 **I've arrived** on site, then **Start diagnosis** — or **More options** → **Start work** if nothing needs checking first.
- 4 If the work needs a price first, tap **More options** → **Needs a quote** and say what to quote. The job waits until the customer approves, then shows **Start work**.
- 5 **Complete job** when the work is done. Add a note for the office if you like, then confirm.

## The steps you can take

| When the job is | You can tap                                                                   | It becomes                           |
|-----------------|-------------------------------------------------------------------------------|--------------------------------------|
| Assigned        | <b>Accept job</b> · <b>Decline</b> (reason)                                   | Accepted · back to the office        |
| Accepted        | <b>On my way</b> · <b>Can't make it</b> (reason)                              | En route · back to the office        |
| En route        | <b>I've arrived</b>                                                           | Arrived                              |
| Arrived         | <b>Start diagnosis</b> · <b>Start work</b>                                    | Diagnosing · In progress             |
| Diagnosing      | <b>Start work</b> · <b>Needs a quote</b> (note) · <b>Put on hold</b> (reason) | In progress · Quote needed · On hold |
| Approved        | <b>Start work</b>                                                             | In progress                          |
| In progress     | <b>Complete job</b> (confirm) · <b>Put on hold</b> (reason)                   | Completed · On hold                  |
| On hold         | <b>Resume work</b>                                                            | In progress                          |

Dispatching, quotations, invoices, cancelling and closing stay with the office (B6, C6).

## Declining or pausing

- **Decline** (or **Can't make it** after accepting) sends the job back to your office with your reason. It leaves your list straight away, and the office gives it to another technician or a new time.
- **Put on hold** when you can't continue, for example while waiting for parts. Your reason shows in the job's history and on the office's job page. Tap **Resume work** when you're back.

## Notes, history and the customer

- **Add a note** at the bottom of the job and tap **Send note**. The office sees it on the job page with your name; you see the office's notes here too.
- **History** lists the job's status changes, with who made each one — you, or your office.
- The customer's phone number is shown while the job is open, and hidden once it's completed.

### Tip

Tapped the wrong step? Tap **Undo** within 4 seconds — steps that don't ask for a reason or a confirmation wait that long before they're sent. Once sent, a step can't be taken back, so add a note for your office.

No signal? You can still read the job, but the buttons say **Connect to the internet to update this job**. If the signal drops while a step is being sent, the app tries again by itself and never sends it twice.

## E6 Verify your email and reset your password

**Verify your email**  
Shown until your address is verified.

**Reset your password**  
Opened from Forgot password?

**Check your email**  
Follow the link, then sign in.

### Verify your email

Most technicians verify their address on the web while accepting the invitation (A4). If not, the app shows **Verify your email** after sign-in.

- 1 Open the verification email from ServiceFlow and tap the link. Check your spam or junk folder if it isn't there.
- 2 Come back to the app and tap **I've verified my email**.
- 3 No email? Tap **Resend verification email**. You can ask for another one after 60 seconds.

### Reset your password

- 1 On the sign-in screen, tap **Forgot password?** The email you typed is carried over.
- 2 Tap **Send reset link**.
- 3 Open the email on any device, choose a new password, then sign in to the app with it.

For privacy, the app shows the same **Check your email** message whether or not an account exists for the address.

## E7 When the app says you can't continue

Each message names the problem and, where it can, offers **Try again** once it's fixed.

| What the app shows                                            | What it means                                                                                                        | What to do                                                                                         |
|---------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------|
| <b>This app is for technicians</b>                            | You signed in with an office role.                                                                                   | Use ServiceFlow on the web, or sign out and sign in with a technician account.                     |
| <b>Your technician profile isn't ready</b>                    | You're a Technician member, but no technician profile is linked to your account.                                     | A Manager adds you in <b>Technicians</b> → <b>Add technician</b> (C3). Then tap <b>Try again</b> . |
| <b>Your technician profile is inactive</b>                    | Your technician profile is set to Inactive.                                                                          | A Manager changes your status (C3). Then tap <b>Try again</b> .                                    |
| <b>Your account isn't active</b>                              | Your membership is suspended, your account is deactivated, or you haven't joined a workspace. The screen says which. | An Owner or Administrator reactivates you on Team (C14) or sends a new invitation.                 |
| <b>We couldn't load your account</b>                          | The app couldn't reach ServiceFlow, or the server had a problem.                                                     | Check your connection and tap <b>Try again</b> . If it continues, tell your office.                |
| <b>Your session has ended. Please sign in again.</b>          | Your sign-in was revoked or your account was disabled.                                                               | Sign in again. If it keeps happening, ask an Administrator.                                        |
| <b>Email or password is incorrect.</b>                        | The email or password doesn't match.                                                                                 | Check both, or use <b>Forgot password?</b> (E6).                                                   |
| <b>Too many attempts. Please try again later.</b>             | Sign-in is paused after repeated failures.                                                                           | Wait a few minutes, or reset your password.                                                        |
| <b>Finish setting up the app</b>                              | This copy of the app is missing its settings.                                                                        | For whoever runs ServiceFlow: complete E1 and restart the app.                                     |
| <b>You're offline. Showing your details from ... (banner)</b> | ServiceFlow can't be reached, so the app shows what it saved at its last check.                                      | Nothing to do: it checks again by itself. Tap <b>Try again</b> once you have signal.               |
| <b>Connect to the internet to update this job.</b>            | You have no signal. Jobs can be read, but not changed.                                                               | Update the job once you're back in signal, or ask your office to.                                  |
| <b>Your update wasn't sent.</b>                               | The app tried several times and couldn't reach ServiceFlow.                                                          | Tap <b>Try again</b> when you have signal. A step is never applied twice.                          |
| <b>This job changed while you had it open.</b>                | The office changed the job meanwhile. The app shows the latest version.                                              | Check the job, then tap the next step again.                                                       |
| <b>This job isn't assigned to you anymore.</b>                | The office reassigned or removed the job.                                                                            | Go back to My jobs. Ask your office if you didn't expect it.                                       |

In Hindi or Telugu, the same messages appear in that language.

## E8 Language and theme

The app works in English, Hindi and Telugu, and can be light or dark. Both are set on the phone, so each technician picks what suits them — before they even sign in.

**Choose your language**

First launch, on a phone set to Telugu.

**Telugu, Dark theme**

Every screen, status and button follows the choice.

**Settings**

Your account, language and theme.

### The first time the app opens

- 1 The app shows **Choose your language**, with the phone's language already selected when it's English, Hindi or Telugu.
- 2 Tap a language — the screen switches straight away, so you can check it reads well — and choose a theme: **System**, **Light** or **Dark**.
- 3 Tap **Continue**. The sign-in screen opens in your language.

### Change it later

- Tap the language button (a globe and the language's name) at the top of the sign-in screen, My jobs or the account screens to open **Settings**. Settings also shows your account and **Sign out** when you're signed in.
- Changes apply straight away; tap **Back** to return.
- The choice is saved on the phone. It stays after signing out or restarting, and each phone keeps its own.
- **System** follows the phone's light or dark setting and changes with it; **Light** and **Dark** keep the app in one theme.

## What follows the language

- Every screen, button and message, job statuses and priorities, and dates and times.
- Password-reset and verification emails, where Firebase has a template in that language; otherwise they arrive in English.
- What people type stays as typed: customer names, addresses, job descriptions and notes. Names of people, the workspace and email addresses stay as they are, and the web admin's section names, such as Technicians, stay in English so technicians and the office use the same words.

### Note

The web admin stays in English.

Before rolling the app out, ask a native speaker on your team to read the Hindi and Telugu screens. Each language's wording lives in one file ([apps/mobile/src/il8n/messages](#)), so corrections are quick.

## E9 What's coming next

Planned for the next releases of the technician app:

- Updates made without signal, sent by themselves once you're back online.
- Photos and customer signatures from the site.
- Notifications when a job is assigned or changed.
- Changing your own availability (Available, Busy) from the phone.

### Note

The office can still update any job on the job page (B6) — for example when a technician calls in from a site without signal.
